## **STATUS OF THE PROJECT**

## 1. STATUS OF THE PROJECT

Irrigated Agriculture Modernization and Water – Bodies Restoration and Management (IAMWARM) is a multidimensional project that envisages bringing about positive changes in the context of Irrigated Agriculture and Farm ecology & economics, involving multiple stakeholders both at facilitation and Implementation levels. The project is being implemented in 60 sub basins in Tamil Nadu. The Project intends to expand the area under Irrigated Agriculture through effective and efficient Irrigated Water Management practices in order not only to grow more crops per drop, more meat, milk and more fish per drop but also to facilitate the farmer in achieving more income per drop of water that he uses for agriculture. The project formulated with World Bank assistance was approved by the Government with an outlay of Rs.2,547 crore, over a period of six years from 2007 to benefit 6.17 lakh hectares.

### **Objective of the Project:**

The IAMWARM project aims to improve the service delivery of irrigation systems and productivity of irrigated agriculture with effective integrated water resources management in a sub-basin framework.

### **Irrigation systems modernisation in a sub-basin framework:**

This component seeks to improve bulk water delivery through modernisation of irrigation systems in 60 selected sub-basins with an ayacut of 6.17 lakh hectares. Activities involve tank

system modernisation by restoring and repairing water bodies and improving canal irrigation systems through repair and rehabilitation.

### **Agricultural Intensification and Diversification:**

This component builds on the improved bulk water delivery to increase the productivity of agriculture-related activities through improved agricultural intensification and diversification of crops, micro irrigation, Animal Husbandry & Inland Aquaculture.

### **Institutional Modernisation for Irrigated Agriculture:**

It is sought to improve the institutional capacity for irrigation service delivery through the Water Resources Department and the Water Users Associations (WUAs) with technically better designs and in a socially sustainable manner. The Water Users Associations would be utilized to implement Participatory Irrigation Management (PIM) by involving farmers.

### **Water Resources Management:**

This component is to improve the institutional arrangements and capacity for sustainable water resources management in the State. In addition the framework for sustainable water resources management will be strengthened through creation of State Water Resources Management Agency (SWaRMA)

## Project Implementation (2007-2011)

The project covers an area of 6.17 lakh ha. spread over 60 sub basins out of the 127 sub-basins in the State.

**Phase - I** - Implementation was initiated during 2007-08 in 9 sub-basins covering an extent of 2.895 Lakh hectare with an outlay of Rs.714.94 Crore in respect of all Departments put together. In the first year itself, works have been successfully initiated by all the Departments.

**Phase - II** -During the financial year 2008-2009, 16 more Sub-Basins with an ayacut of about 0.672 Lakh ha. were taken up with an outlay of Rs.243.25 Crore.

**Phase-III** – During the financial year 2009-10 30 Sub Basins with an ayacut of 1.821 Lakh Ha were taken up with an outlay of Rs. 538.85Crore

**Phase – IV** – Apart from Cooum & Adayar sub basins three alternate sub basins viz., Cheyyar & Kiliyar, Paralayar & Kayalkudiyar have been proposed to taken up for an ayacut of 0.77 Laksh Ha with an outlay of Rs. 216.00Crores. Detailed Project Reports (DPR) are approved by World Bank and obtaining Administrative Sanction is under progress.

## Water Resources Department:

In respect of Water Resources Department, in 9 Sub Basins of Phase-I, 66 packages were taken up in first year for an amount of Rs. 400.083 Crore. Works were completed in 63 packages & in progress in 3 packages. In second year, 10 packages at a value of Rs.49.225 Crore were also taken up in PAP and works completed in all 10 packages.

For the 16 sub-basins in Phase II, bids have been finalised for all the 43 packages for a value of Rs. 189.053 Crore. Works completed in 33 packages and works are in progress in 10 packages.

For the 30 Sub Basins taken up under Phase-III, bids called for 93 packages for an amount of Rs. 257.055 Crores and works in 92 packages are in progress with one package agreement conclusion is under progress. Bids are to be decided in 11 packages and to be called for 32 packages.

## Phase – I Sub Basins Progress

Rehabilitation of irrigation infrastructure -9 sub-basins		Proposed	Completed	In progress
a)	Tanks	1634 Nos	1579 Nos	42 Nos
b)	Anaicuts	233 Nos	217Nos	34 Nos
c)	Supply Channels	3068 Km	2973 Km	15 Km

## Phase-II Sub Basins Progress

Rehabilitation of irrigation infrastructure -16 sub-basins		Proposed	Completed	In progress
a)	Tanks	757 Nos	557 Nos	183 Nos
b)	Anaicuts	165 Nos	134 Nos	27 Nos
c)	Supply Channels	1092 Km	812 Km	205 Km

## Phase-III Sub Basins Progress

Rehabilitation of irrigation infrastructure -30 sub-basins		Proposed	Completed	In progress
a)	Tanks	1672 Nos	4 Nos	220 Nos
b)	Anaicuts	255 Nos	1 No	59 Nos
c)	Supply Channels	2670 Km	50 Km	213 Km

### Water Users' Association:

Under Participatory Irrigation Management, elections to 1300 Water Users Associations have been completed during 2009 – 2010. During this year, elections to 1020 WUAs pertaining to III Phase sub basins have been conducted. On the whole, 2320 WUAs have been formed out of 2361 WUAs in I, II & III Phase Sub basins.

Support Organizations (SOs) are also to be positioned shortly for providing capacity building to all WUAs in 21 sub-basins, with the agreements to be concluded. The procurement of SOs for the remaining 34 sub-basins is in progress. The SOs is required to motivate the farmers / WUAs Members etc for involving and sharing their responsibilities in line with the TNFMIS Act.

### Agricultural Engineering Department

Agricultural Engineering Department have installed Micro Irrigation systems in 13328.61 hectares, 1685 Farm Ponds and 24 Water Harvesting Structures have been constructed in Phase - I, II and III sub-basins. Further in these sub-basins, 794 Farm Machineries have been distributed to the Water User's Associations and 8 packages of Improved water conveyance system using PVC pipes have been laid so far, since inception.

### Agriculture Department

Crop Demonstrations for paddy, pulses, maize, groundnut etc were conducted in 43355 hectares in the 55 sub basins. Significant improvement in yield upto 54% in paddy (SRI), 86% in Maize and 72% pulses was achieved. An impact area of 287023 hectares has been identified and

## Annual Report 2010 - II

216046 hectares was covered.

Exceptional yields were recorded in SRI and pulses Demonstrations in the following areas:-.

Swethanadhi Sub Basin, Thondaimanthurai Village in Perambalur District – Paddy 11374Kg per hectare as compared to 6327 Kg per hectare in the previous year.

Varahanadhi Sub Basin, Vikravandi Village in Villupuram District – Pulses (Black gram) 1375 Kg per hectare as compared to 866 Kg per hectare in the previous year.

### Horticulture Department

Horticulture Department both by way of Diversification and Transfer of latest crop production technologies an additional area of 28258 ha has been brought (Phase I, II & III) under fruits, vegetables and other horticultural crops covering 55 sub-basins.

### Tamil Nadu Agricultural University

System of Rice Intensification (SRI) - the concept of more with less has been demonstrated by TNAU. The SRI technique consistently recorded higher average yield increase to the tune of 25-30% in most of the demonstrations laid throughout the state as compared to the traditional practice. In few demonstrations exceptional yields have been recorded.

During 2010-11 a farmer Thi. V. Thangamarimuthu from Gollapatti Village of Vaippar sub basin in

Virudhunagar district recorded 9720 kg of Paddy per ha through SRI as compared to 5220 kg per ha (86% increase) in conventional method.

Thi. Ganesan of Poovarasakudi Village, Thiruvarangulam block of Pudukottai district (Southvellar sub basin) recorded 913 kg of blackgram per ha as compared to 650 kg/ha. (40% increase in yield) under traditional method of Pulses cultivation.

During 2010-11 improved production technologies was demonstrated in Pulses (4593 ha), Groundnut (935 ha), Chillies (314 ha) and in Cotton (116 ha).

The Precision farming by the TNAU during 2010 – 11 has led to significant yield increase in various crops. Thi. Murugan of Koundinyanadhi sub basin has harvested 4000 kg/ha of dry chillies under precision farming as compared to 1500 kg/ha in conventional method. This farmer realized around Rupees one lakh of increased income per ha due to the adoption of precision farming.

### Agricultural Marketing

To support farmers with Infrastructure and Technology, thereby enabling them to earn more income. This is being done by building Drying yards, Storage sheds, Collection Centres and Agri Business Centres. Farmers are provided with Marketing Information through latest technologies. Farmers are grouped into Commodity Groups and facilitated by signing

Memorandum of understanding with private companies for specific diversified crops.

### **Animal Husbandry Department**

To increase the conception rate, Infertility and total Veterinary Health Care camps were conducted. To improve milk yield, the availability of green fodder was increased and an additional area of 8196 hectares was brought under fodder cultivation.

### **Fisheries Department**

Aquaculture has been promoted in Farm Ponds as an additional income generating activity in 559 Ponds. To meet the fish seed requirement 110 seed rearing cage Units and 12 Fish seed banks have been established. Sixteen ornamental fish culture units were established to promote rural employment and income to farmers. Hygienic fish marketing is facilitated by installing 22 Modern Fish Kiosks.

**Table 1 - Component wise Expenditure upto 31.03.2011**

## YIELD DATA (2010-11)

### 1. System of Rice Intensification

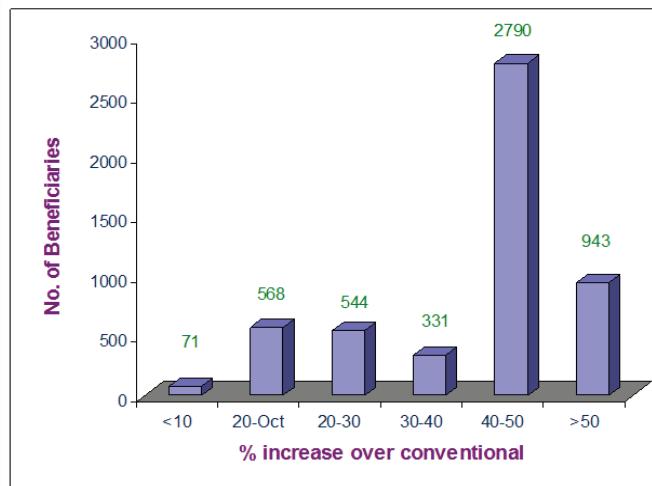

Sub-basin	SRI (kg ha <sup>-1</sup> )	Conventional (kg ha <sup>-1</sup> )	% increase over Conventional
Varaghanadhi	6914	5212	32.7
Upper Vellar	7116	4698	51.5
South Vellar	7593	4856	56.4
Pambar	8579	5279	62.5
Manimuthar	5141	4331	18.7
Kottakaraiyar	5444	4690	16.1
Arjunanadhi	6307	4919	28.2
PAP-Aliyar	5940	4689	26.7
Pennaiyar	8130	4700	73.0
Agniyar	5714	4073	40.3
Ambuliyar	5866	4603	27.4
Anaivari Odai	7860	6640	18.4
Chinnar	6425	5596	14.8
Swethanadhi	9032	4667	93.5
Kalingalar	7040	5477	28.5
Nichabanadhi	9442	7364	28.2
Therkar	6300	5700	10.5
Upper Gundar	6165	5214	18.2
Senkottayar	6350	5375	18.1
Poiney	7883	4817	63.6
Koundinya nadhi	8137	5472	48.7
Total/Mean	7369	5419	36.0

During 2010-11 SRI was demonstrated in an area of 3983 ha for the benefit of 5247 farmers. The performance of SRI showed increment in rice yield to the tune of 36 per cent over conventional practice. The overall average yield recorded under SRI was 7369 kg/ha and conventional practice was 5419 kg/ha. Nichabanadhi sub basin registered the highest SRI yield of about

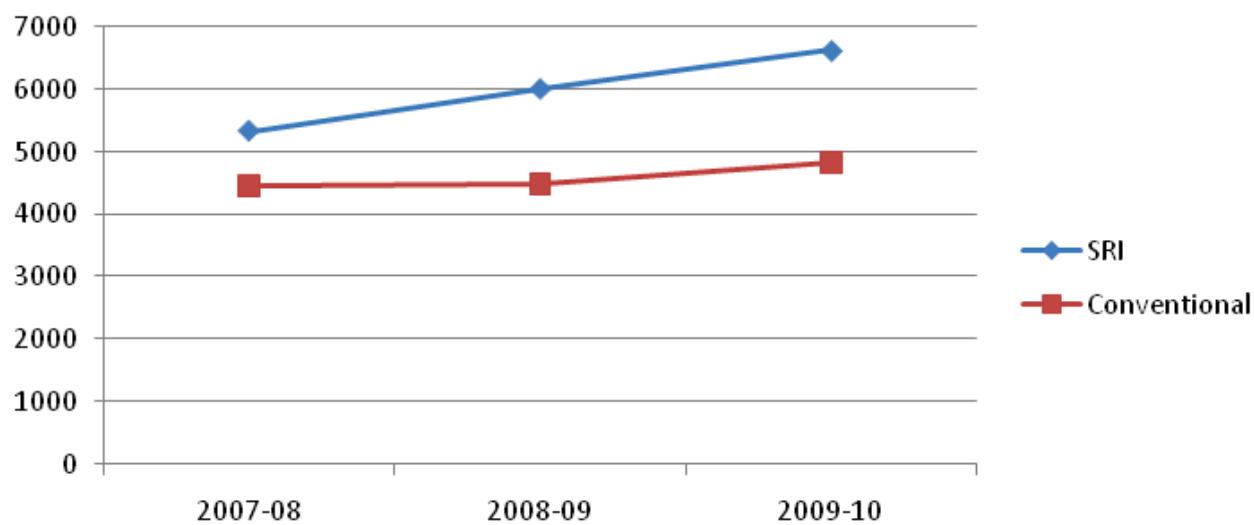

9442 kg/ha followed by Swethanadhi (9032 kg/ha) sub basin under SRI. A wide variation (10.5 to 93.5%) in yield increase due to SRI over conventional was found for different subbasins. The highest percentage increase was recorded in Swethanadhi sub basin (93.5) and the lowest percentage increase was found in Therkar sub basin (10.5).

Beneficiaries wise analysis of yield increase over conventional yield indicated that majority of the beneficiaries (2790) realized increase in yield about 40-50 per cent followed by more than 50 per cent in 943 beneficiaries. About 568, 544 and 331 beneficiaries realized the yield increase about 10-20, 20-30 and 30-40 percent, respectively. The small numbers of beneficiaries (71) realized less than 10 per cent yield increase.

### Beneficiaries wise analysis (SRI)

### Raising Yield Levels of SRI in IAMWARM Project (Kg/ha.)

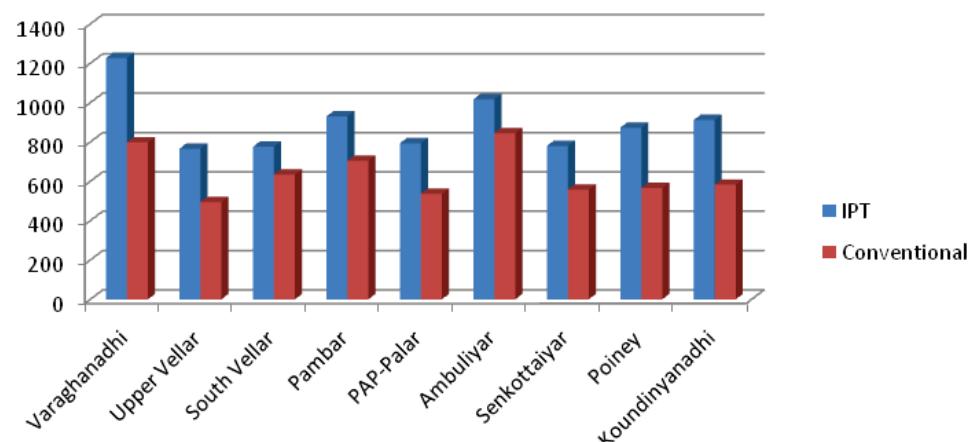

## IPT on Garden land pulses

Name of the Basin	IPT (kg/ha)	Conventional (kg/ha)	% increase over conventional
Varaghanadhi	1227	798	53.8
Upper Vellar	766	495	54.7
South Vellar	776	634	22.4
Pambar	930	705	31.9
PAP-Palar	794	536	48.1
Ambuliyar	1017	845	20.4
Senkottaiyar	780	558	39.8
Poiney	873	566	54.2
Koundinyanadhi	912	583	56.4
<b>Total/Mean</b>	<b>897</b>	<b>636</b>	<b>41.2</b>

Demonstrations on Improved Production Technologies in pulses have resulted in 41 percent yield increase (mean yield) over the conventional method of pulses cultivation. The average yield of IPT Demonstrations was 897 kg/ha. Highest yield increase was observed in Upper Velar sub basin where nearly 55 percent yield enhancement was recorded.

**Yield - IPT Vs Conventional (kg/ha)**

## GLIMPSES FROM THE FIELD

## WATER RESOURCES DEPARTMENT

**Madurai Region**

**Arjunanadhi Sub Basin**

**(Package 1/SLICE 2)**

**Sivagangai District**

**Gunavanthaneri Tank - Reconstruction  
of sluice**

Gunavanthaneri tank is situated in Kodikulam village of Srivilliputtur taluk of 35.1 Mcft with an ayacut of 155.30 Ha. There are four sluices in this tank. Sluice no.1,2, and 3 were in damaged condition, leaky and not performing well. Farmers found difficult in feeding water to the crops.

Works carried out (Estimate cost Rs 37.90 Lakhs)

Under the project, the three damaged sluices were reconstructed with necessary side retaining walls and replacing S.G.Plug Shutter. Leading channels with necessary wings and return wall were provided to draw water easily from the deeper portion of tank bed.

### **Farmers Opinion**

Farmers of Gunavanthaneri tank have appreciated that the works are carried out to fulfill their requirements and said that "We have got the solution of long years problem."

**BEFORE EXECUTION**

**AFTER EXECUTION**

## Arjunanadhi Sub Basin (Package No.3)

Sivagangai District

Mathur Anicut

**Mathur Anicut was constructed across Kalaniyar river in Watrap Block of Virudhunagar District.**

### Pre Project Condition:

The existing anicut was constructed in Brick Masonry in lime mortar for body wall and abutment and R.R. Masonry for head Sluice which was in dilapidated condition. Apron also was in collapsed condition.

**BEFORE EXECUTION**

### Post Project Condition:

Construction of anicut work was completed in 12 / 2008 with pucca head sluice arrangements.

### Farmers opinion:

The farmers of this Anicut have said the opinion that "we have got the permanent solution for every year problem.

**AFTER EXECUTION**

## Trichy Region

### Pambar Sub Basin (Package 1)

#### Pudukottai District

#### NEDUNGUDI PICK UP ANICUT

#### BEFORE PROJECT

All the components of the anicut was found damaged. Plastering of abutments was found eroded. The scour vent, regulating structures, downstream stilling basins were found damaged. Banks of supply channel was found weaker. As a result farmers were disappointed and demanded immediate restoration of the anicut.

**BEFORE EXECUTION**

#### AFTER PROJECT

Water seepage in the scour vents portions has been arrested completely. Abutments of this anicut has been strengthened properly. Breaches across the banks of the supply channel during flood times has been arrested completely. For the first time in recent years the chain of tanks downstream have surplused and all tanks have attained their full capacity. Also, there is enough store of water in the anicut to be supplied during the summer. There has been improvements in the total cultivated area of all the tanks downstream and as a result farmers are greatly satisfied and happy over the restoration of the anicut.

**AFTER EXECUTION**

## Coimbatore Region

### Aliyar Sub Basin (Package 5)

#### Coimbatore District

#### Rehabilitation of Pollachi canal from L.S. 20/000 KM to 48/000 Km and its distributaries . Est. Rs. 510 Lakhs

The earthen canal in this reach was in bad shape with lot of seepage and time taken for water to reach tail end was about 36 hours. Hence in the project, this portion was lined with concrete.

After construction the water is effectively flowing into the canal without any wastage of water.

After lining the earthen canal, the duration taken for 200 to 210 cubic feet water to reach from zero point to tail end was reduced to only 17 hours.

Since the earthen canals are completely lined with concrete, the banks are protected from the heavy breaches & arrest of seepage water so that there is no loss of water and the quantum of water reaching the tail end is adequate and in time.

During the construction period the work was inspected by the WUA presidents,

TC members and other members, then and there. The farmers expressed their satisfaction and happiness.

**BEFORE EXECUTION**

**AFTER EXECUTION**

**AFTER EXECUTION**

## AGRICULTURE DEPARTMENT

### I. SRI – Crop Demonstration:

#### Success Story – 1

Mr. D. Selvakumar of Thiruvampattu village of Vallam Block is a happy Farmer these days. He

has planted White Ponni variety in Phase I in V arahanathi sub-basin of Villupuram District and obtained an yield of 10950 kg/Ha. This is 90%

more than the conventional yield of 5760 kg/Ha. This is a land mark achievement of the Project in the District.

#### Success Story – 2

Mr. V. Balasubramanian a farmer of Vasudevanallur village in Vasudevanallur Block has grown Try.1 variety in the village in Phase II in Kalingalar sub-basin. The conventional yield would be 8342 kg/Ha. and by Project efforts the yield had come to 11917kg/Ha. This would mean as much as 88% more than the usual yield which is a record achievement by any standard. This village is in Tirunelveli District

### II. Hybrid Maize Crop Demonstration:

#### Success Story – 3

Mr. O. Venkatachalam of Thligaividuthi village Thiruvonam Block is another successful Maize farmer, who has grown Samrat Hybrid variety in Phase II in Agnier sub-basin in Pudukottai District. He has obtained a yield of 8750 kg/ha. a record 67% increase over 5246 kg/ha. which he normally could have obtain by following

conventional methods. The credit to this goes to Project Agriculture Department officials,

who had helped him by providing necessary inputs and technology.

#### **Success Story – 4**

Mr. M. Ganesan is a farmer living in Moovarai vendran village of Watrap Block in Phase I in Argunananthi sub-basin. He has grown NK.6240 Hybrid Maize. By following the guidance of Project officials, he has obtained a 54% increased yield of 7720 kg/ha. as against the normal of 5018 kg/ha. by following conventional methods. This a success story by any standards and the one to be followed by everyone in Virudhunagar District.

#### **III. Pulses Crop Demonstration:**

##### **Success Story – 5**

Mr. V. Kasi of Vikravandi village is a Pulses growing farmer in Phase I in Varahanadhi sub-basin in Villupuram District of Phase I. He has grown Blackgram with a variety T-9 and obtained a yield of 1375 kg/Ha. An increase of 59% over the conventional methods. He would have obtained 866 kg/ha only according to conventional methods but was able to manage this increased yield with the help of Agricultural Department Project officials. Other farmers in

the village look to this farmer for guidance in growing Blackgram.

##### **Success Story – 6**

Mr. R. Pitchai of Kulanaikerpattai village of Gandharvakottai Block in Phase II in Agnaiar sub-basin in Pudukottai District has grown Pulses – VBN -3 Blackgram and has obtained

## Annual Report 2010 - II

a record yield of 1500 kg/ha a 52% increase over the conventional method of cropping. By the conventional method, he could have obtained only 985 kg/ha. Adaption of improved cultivation practices including usage of improved variety has helped him to achieve this increased yield.

## TAMIL NADU AGRICULTURAL UNIVERSITY

### Chillies

Precision farming is an innovative technology which helps the crops to attain its maximum yield potential and obviously, enhanced yield is reaped by the farmers. Hence, TNAU is guiding

the farmers in the sub basins to adopt precision farming in vegetables and other horticultural crops. In Koundinyanadhi sub basin, precision farming demo was conducted in chillies crop

and Mr V.Murugan has harvested 4000 kg per hectare (dry chillies) whereas, yield obtained through conventional method was only 1500 kg/ha. Adoption of precision farming has resulted in increased income to the tune of Rs.1.0 lakh per hectare.

### Banana

Similar success was observed in Banana crop. Mr P. Rangasamy of Kaliyappagoundenpudur, Thiruppur district of Palar sub basin has harvested 75 tonnes per ha in banana crop

whereas, the banana yielded only 55 tonnes per ha in the conventional method of cultivation. He also indicated that nearly 35 percent water savings was observed by switching over to precision farming. In addition to this, he has

saved 50 per cent of fertilizer cost by using the need based water soluble fertilizers. The farmer has also observed less incidence of pests and disease in his banana crop under precision farming method.

## Vegetables

Mr G.Dharmaraj, of Samiyandipudur of Palar sub basin is highly satisfied by the performance of Precision farming in Vegetables. He has raised bitter gourd and ribbed gourd in 1.31 hectares under precision farming. He has opined that the cost of cultivation under precision farming is less expensive except for the first crop which is due to layout charges for drip to an extent of 35 per cent. He was much

happy because cost of labour was very much low and the labour requirements for irrigation, plant protection and fertigation were met out by his family itself. The fertilizer was given along with irrigation water without any wastage at required time with proper supervision and it has enhanced its efficacy. In general, the vegetable crops are much prone to pest and

diseases incidence. But his crop under precision farming with controlled irrigation has checked the pest and diseases incidence to a considerable level. The yield obtained under precision farming in bitter gourd was 63.4 tonnes per ha, which was 24 percent increased over the conventional method. This has ultimately resulted in additional income to the tune of 30- 40 percent. The farmer has also observed that the vegetables grown under precision farming had higher consumer preference due to its increased size and weight which resulted in higher market price for his produce.

## Coconut

Introduction of precision farming in coconut has revolutionized the irrigation concept in coconut cultivation especially in Palar sub basin. Initially the farmers were of the mindset that the drip irrigation was meant for dryland crops only (Mr. Palanichamy, Vettaikaranpudur). The farmer has

adopted precision farming in 2.2 hectares and the farmer is getting additional income by practicing intercrops like pulses in coconut crop which was not in vogue in his field previously.

### Improved Production Technology in Garden Land Pulses

Pulses demonstration in 1.0 hectare was conducted in the field of Mr. T.Ramasamy of Padarnthapuli village of Pudur block, Vaippar sub basin. Previously, farmers do not pay much attention on plant population maintenance in pulse crops. But in the IPT demo, the scientists of TNAU explained the importance of plant population and DAP spray. Accordingly, plant population was maintained and 2 sprays of DAP were given to the pulses crop. The farmer has harvested 750 kg/ha grain and got a net income of Rs.25490 in just 75 days and on seeing the success, the farmers has decided to sustain the IPT in pulses. Besides, the farmer has now become a mouth piece for IPT on pulses in particular and IAMWARM project in general in the Vaipar sub basin.

### Touch Screen Kiosks

In the technology revolution scenario, the usage of computers among the farming community through farmers' friendly approach is need of the hour. Hence, use of ICT tools was piloted in Varahanadhi sub basin by employing touch screen kiosks. These touch screen kiosks contain a computer with touch

screen technology, internet connectivity and it was supported by scientific manpower of the University. The farmers can get information

on agronomy, pests and diseases, crop management and post harvest technologies through the TNAU agritech portal. The farmers can get the needed information in the vernacular language viz., Tamil and it has actually gave the desired impetus for the success of the pilot project. Through the DEMIC cell and Agricultural Marketing website farmers can obtain dynamic price information on major perishables on day to day basis for major markets of the State. Besides, the farmers can also access the price forecasting reports for major agricultural crops for the subsequent seasons. Access to the TNAU weather site guides the farmers to plan their agricultural activities based on the weather and its forecast. Case studies on better market price for vegetables (brinjal) to the tune of 20 per cent by routing the produce to Koyembedu market rather the local market through the usage of the touch screen kiosk was observed in Chendur village of Varahanadhi sub basin.

### Formation of Women SHG for SRI planting.

An innovative step was initiated by TNAU in Poiney sub basin – formation of Women Self Help Group for SRI planting. In Poiney sub basin, at Velam village, the SHG was formed. TNAU has given on-campus training on SRI planting with ropes and markers to the member women. Owing to these trainings, the SHG women have planted nearly 800 ha under SRI method in Poiney and Kaundinyanadhi sub basins. The SHG women were now empowered to get an additional wage of Rs.20 per day over their normal wage rate and they express their gratitude to IAMWARM Project and TNAU.

## HORTICULTURE DEPARTMENT

### BHENDI

Thiru. C. Ponnusamy, S/o. Chella Pillai of Navallur Village, Thalaivasal Block, Salem District is an enthusiastic farmer who always comes forward to take up the suggestions and guidance of the Horticulture Department and earn good income by cultivating horticulture crops, especially vegetables.

In 2010 this farmer has cultivated Geofresh 101 HB Bhendi crop in 0.50.0 ha (Survey No. 275/4, 274/7). All the inputs required including hybrid seeds worth Rs.7500/- (Rs.15000/ha) were supplied to the farmer at free of cost under the project. The farmer has adopted all the agronomic practices and the latest crop production technologies as suggested by the local horticulture staff. The farmer has applied fertilizer as per the recommendation of the soil test result on 06.03.2010 the farmer has dibbled the bhendi seeds in ridges and furrows. The farmer has followed the INM and IPM practices under the guidance of the local horticulture staff. The first harvest started on 36th day. In about 22

pickings, the farmer got about 12.38 mt. In each picking he got about 400 kgs on an average. During each harvest the farmer has graded the produce based on size and quality and sold at different rates in the market. He sold the produce in the local market at Rs.6/kg on an average. The total expenditure incurred by the farmer was Rs.9250/- including the cost of inputs supplied under the project. The Gross income was Rs.74280/- and the net income was Rs.65030/- in 4 months. The farmer is satisfied about the guidance under the project, performance of the crop, the income etc., and want to continue to take up bhendi crop in future seasons also, besides recommending the bhendi cultivation to the local fellow farmers. Many local farmers visited his field, especially in bearing stage and

appreciated the yield level, colour and size of the produce. Atleast few among the many farmers who have visited his field may take up this crop in the ensuing seasons to come.

### TOMATO

My name is P. Thangavel. My father's name is Thiru. Palani. I hail from Balakombai village, Aundipatti Block, Varattar Nagalar sub-basin, Theni District.

Based on the suggestions and guidance given by the Horticulture Department, I have cultivated Hybrid Tomato in 0.50.0 ha in 2010 under the project (survey no. 26/2). The variety is US3140. I got all the inputs including the HB Tomato seeds worth Rs.7500/- from the Horticulture Department at free of cost under the project.

The raised bed nursery was prepared and 75 grams of seeds was used. The main field was prepared as guided by the Horticulture staff with ridges and furrows. Fertilizers were applied to the field as per the soil test result recommendation. 25 days old healthy seedlings were transplanted in the main field on 10.03.2010. I followed the INM and IPM practices as suggested and guided by the local horticulture staff then and there based on the crop condition. The first harvest

started on 17.05.2010 and got the total yield of 17.5 mt in about 18 pickings. In each picking I got about 350kgs yield on an average. The total expenditure incurred including the inputs given to me at free of cost under the project is Rs.17500/-. The gross income was Rs.52500/-. The net income was Rs.35000/- in 4 ½ months period. Earlier, I used to grow mainly maize and cumbu crops. The net profits obtained through these crops were less than 50% of the income I got in Tomato crop.

I am very much satisfied and happy about the yield and income I got through tomato crop. I have programmed to take up tomato crop cultivation again in the next season also. Many fellow farmers in my village have also seen the performance of the tomato crop in my field and they expressed their desire to take up tomato cultivation in the subsequent seasons. They

were specially attracted by the uniformity in size and colour of the fruits.

I am very much thankful both to the project and the Horticulture Department for all the assistance and guidance given to me from sowing to harvest of this crop. It is my pleasure to share my experience in tomato cultivation for the benefit of the farmers in the nearby villages and the farmers elsewhere. I will be more happy, even if very few farmers are benefited based on my experience

## AGRICULTURAL ENGINEERING DEPARTMENT

### DRIP IRRIGATION FOR VEGETABLES

Growing Vegetables in Varaganathi Sub basin has assured marketability as it is nearer to Greater Chennai. But, farmers are reluctant to go for Vegetables cultivation as they have no awareness about it. Thiru Mugunthan, S/o. of

Thiru Pandurangan hails from Konakkampattu village near Thindivanam is a small farmer having a land of 1.60 acres. With the available water, he was content with growing paddy in 0.5 acres for one season, leaving the rest of his land as fallow.

The Engineers from AED approached him and explained about switching over to high income generating vegetables coupled with Drip Irrigation. Motivated by officials, hesitant Mugundan, finally decided to go in February 2010 for 4 types of vegetables viz. Brinjal in 0.60 acres, Bhendi in 0.20 acres, Rip Gourd in 0.30 Acres and bitter Gourd in 0.35 Acres. Drip Irrigation with fertigation was installed at a total cost of Rs.58,000/- of which, his contribution was Rs.36,000/-.

Within a span of three months, he started

getting yields. The farm produces were sent to Chennai Koyembedu market. Besides, he put a stall nearby his farm and started selling the vegetables. Vegetables have earned him Rs.42,000/- and going on. Now, he has become a role model for his village and is advocating for Drip Irrigation and Vegetables.

## COST TABLE FOR VEGETABLES CULTIVATION

Description	Brinjal	Bhendi	Rip gourd	Bitter Gourd
Cultivated Area	0.60 Acre	0.20 Acre	0.30 Acre	0.35 Acre
Date of Cultivation	20.04.10	03.02.10	10.03.10	10.03.10
Total Yield	350 Kg	1500 Kg	1200 Kg	1250 Kg
Selling Price	Rs. 8-10 /Kilo	Rs. 8-10 /Kilo	Rs.10-12 /Kilo	Rs.12-15 /Kilo
<b>Total Income in 3 months</b>	Rs.2,800/-	Rs.12,000/-	Rs.12,000/-	Rs.15,000/-
	Rs.41,800/- in Three months			

### Drip Irrigation – Palar sub-basin

Drip irrigation in Onion

Harvest of Onion under Drip irrigation

#### (i) Before TN-IAMWARM SCHEME:

Area under cultivation	2.50 Acre
Total Onion yield	12.50 M.T
@Rs.15000/mt the total Income:	Rs.1,87,500/-
Average Income per acre	Rs.75,000/-

#### (ii) After adopting Drip system under IAMWARM:-

Area under cultivation	5.00 Acres
Onion yield from Drip Area of 3.00 Acres	6.50 M.T/Acre
Total yield from Drip Area	19.50 M.T
Onion yield from Non-Drip Area of 2.00 Acres	5.00 M.T / Acre
Total yield from Non-Drip Area	10.00 M.T
Total yield of onion from Drip & Non-Drip Area	29.50 M.T
@Rs.15,000/M.T. total income	Rs.4,42,500/-
Average Income per Acre	Rs.88,500
Additional income per Acre	Rs.13,500/-
Percentage of Increase in income per Acre	18%

## Fish culture in farm Ponds

### FORM POND WITH FISH CULTURE

- T.Thavamaniyammal, Kandaneri, in Koundanya Nadhi sub basin
- Fish culture fetched an additional income of Rs.3800/-

## Farm Machinery distributed to WUAs

Rotavator

Paddy Transplanter

794 Machineries like Rotavator, Multi crop thresher, Maize Husker cum sheller, Seed drill, Paddy Transplanter, Post hole digger, Turmeric Harvestor etc have been distributed to WUA and Rs. 5.60 Lakhs was collected as hire charges from the farmers by the WUAs.

Solar Chilli drier

Maize Husker cum Sheller

## AGRICULTURAL MARKETING DEPARTMENT

**Mrs. Malarvizhi Arumugam**  
**Ogalur village,**  
**Perambalur District, Tamil Nadu**

Mrs. Malarvizhi is a Maize farmer. She is doing farming in 3 acres of land. She says "I was growing NK 6240 variety of Maize in my land. Last year I was approached by Marketing officers of TN-IAMWARM Project. They inspected my farm and suggested to do soil testing first. Then they trained me on how to store maize after harvesting. They also educated me on grading and favourable harvesting periods for maize. This encouraged me and my fellow farmers to form a maize commodity group. In the subsequent season they helped us in signing a memorandum of understanding (MoU) with a trader. Since then we are following all that was taught to us and do drying, grading, cleaning, and packing meticulously. We sell our produce without any middle man interference from then on. I produced 7500 kg in 3 acres and sold at a price which is atleast Rs.50 (per bag) more than any farmer in our area. There by I get a additional price of Re.0.50 per kg and earn a minimum of Rs.3750/- as additional profit. I wish all other farmers to do the same and get benefited. I also express my gratitude to Agri Marketing officers who helped me.

**Mr. Ramakrishnan**  
**Andiagoundanur Village**  
**Palar Basin**

I am growing coconut trees for past several years. I was selling my coconuts to local traders based on the local price. In this system I was giving commission to the local traders. Though I know that the commission I give is unreasonable for a farmer like me I did not have any other option. Last season I met officials from Agri Marketing Department of TN-IAMWARM Project. That was a turning point for me. Marketing officials advised me to form groups with farmers like me growing coconuts. I too took initiative and gathered a group of farmers and we used to meet once in a month. Marketing officials advised our

group to do Value addition to Coconut and sell as Copra. They also communicated the market price of copra through SMS (message to our mobile phones). We followed their instructions and started processing the coconuts to copra. Now, we sell copra in Government Procurement Centres at an additional price of Rs.8 per Kg. Hence, we get an additional profit of Rs.8 per kg. for all the copra that we are producing in our commodity groups.

**Mr. M. Poongavanam**  
**S/o. Manikkam,**  
**Aalagramam, Villupuram District**

Mr. Poongavanam of Aalagramam village is having 4 acres of land and he used to cultivate crops like Vegetables, Blackgram and Groundnut. In this village vegetables are cultivated throughout the year. This season he cultivated Bhendi. Mr. Poongavanam says "During the times of harvest, I used to suffer like other farmers without proper transportation facility. After incurring Rs.40 per bag for transportation, I used to sell the vegetables to the local traders at lower price without knowing the market price. Through TN-IAMWARM Project, Vegetable commodity groups were formed and tie-ups were made with Mappillai Vinayagar Traders, Pondicherry. Also, a mini auto was given to our Water User Association. The auto was very useful in carrying our vegetables on time to Pondicherry at the cost of Rs.30 per bag. I incurred a sum of Rs.22,000/- for growing Bhendi and I got 6450 Kg. as yield. I sold the vegetables at the rate of Rs.11 per Kg which is one rupee higher than the local traders. Because of the Mini auto, transporting vegetables became very easy, less expensive and time saving. Finally, I have got a profit of Rs.48,000/- in Bhendi cultivation due to the market tie-up through TN-IAMWARM".

## ANIMAL HUSBANDRY DEPARTMENT

### Success Of Feeding Co3 Slips To Dairy Animals

**Chithirampatti Village, Viralimalai  
Panchayat Union, South Vellar**

Mr.Palaniyandi, was given Co3 slips to cover 10 cents during 2007-08. He increased his

cultivation area to 20 cents during 2008-09 and the area is sustainable till today.

In 2009-10, Mr.Palaniyandi, has given Co3 slips free of cost to Mr.Ravichandran to cover 10 cents who is maintaining 3 crossbred cows.

In 2010-11, Mr.Palaniyandi, has given Co3 slips free of cost to Mr.Mohan to cover 10 cents who is maintaining 3 crossbred cows.

All the farmers say that there is an increase of 1 to 1.25 litres of milk per day per crossbred animal. Moreover they have reduced giving around 1 kg of concentrate. Hence by feeding Co3, there is a gain of around Rs.50 per day per animal.

## Success Of Azolla Demonstration

### Latheri Village, Latheri Panchayat Union, Koundinyanadhi

Mr.Elumalai maintaining 2 cows was given Azolla training on 09.01.2010. On completion

of training he was given silpauline sheet under the project.

Started Azolla cultivation immediately. Extended one more plot on his own. Gets

an average yield of 800 gms to 1 kg per day per plot and feeds both his cows. He has reduced concentrates by 1 kg per animal.

By feeding azolla daily, he has an additional income of Rs.45/- per animal per day by increase in milk production and reduction in concentrate feeding. Apart from this, the animals are more healthy and conception rate has improved.

## Success Of Artificial Insemination In Pambar Sub-Basin

Farmers of Pambar sub-basin with their cross-bred heifer calves born through Artificial Insemination.

## FISHERIES DEPARTMENT

### Additional income through Aquaculture in Farm Ponds:

Aquaculture was promoted in Farm ponds which were excavated primarily for rain water harvest, ground water recharge and critical

irrigation. Majority of the farm ponds yielded fish production of 300Kg to 600Kg and an average net income of about Rs. 15,000/- per Crop. Many farmers judiciously utilized the pond bunds to raise Horticulture crops which yielded income and minimized bund erosion.

Here are instances in which the Farmers were able to accomplish an excellent fish production of over 600Kg/Pond(0.1ha)/Crop by scrupulously following good management practices advocated by the project.

#### Chinnar Sub-basin:

Thiru. A. Pannerselvam and Thiru. K. Karuppiah of Ogalur Village got a net income of about `15,000/- per crop from Farm Pond aquaculture promoted by the Project. This has motivated a neighboring Farmer of the same village Thiru. Ramasamy to excavate a Farm Pond and take up aquaculture with his own investment. He was trained in Good aquaculture practices by the project. The farmer was also encouraged to raise Horticulture crops in the bund. He was able to harvest 610Kg of fish which is excellent by the average production level in the semi intensive culture systems in Tamil Nadu. A net revenue `19,000/- was realized from fish yield and ` 1800/- from the vegetables and flowers raised in the bund.

#### Salient Details:

Fish seed Stocked	- Catla, Rohu, Mrigal, Grass Carp.
Feed used	- Conventional feed. (Rice bran+GOC)
Culture Period	- 8 Months.
Fish Production/ha	- 6.10 tonnes/ha

#### Manimuthar Sub-basin:

Thiru.M.Subramaniyam of Kurunthanpattu Village was able get a net revenue of `24,000/-

with a total Fish harvest of 635Kg from his Farm Pond. He was able to triple his profit from the same land which was used to Cultivate Paddy and is sustaining the aquaculture activity. The bunds of the ponds are effectively utilized to get economic return by planting teak saplings and fodder.

## Salient Details:

Fish seed Stocked	- Catla, Rohu, Mrigal,
Culture Period	- 8 Months.
Fish Production/ha	- 6.35 tones/ha
Net Profit	- `24,000/-

## **External Evaluation of IAMWARM Project**

## External Evaluation of IAMWARM Project

IAMWARM project was evaluated by external agencies viz., Institute for Sustainable Development, Chennai and SMEC Ltd, Australia which is the monitoring and evaluation agency for the IAMWARM project.

### ISD Chennai

A rapid assessment on the impact of IAMWARM project was conducted by the institute. The principal objective is to measure the impact of the project on farming community, farming practices, irrigation service delivery and farm income through project interventions in crop diversion and horticulture area expansion. The study was conducted in selected three Phase I sub basins. They are Varahanadhi, Upper Vellar and Palar sub basins.

All the farmers in selected tanks formed the sampling frame and sampling was done using probability proportionate sampling method. Systematic random sampling method was used to select the farmers from each tanks. 32 Water User Associations and 223 individual farmers were contacted from the area where the project has been active since 2007-08. As a control, 18 tanks belonging to similar socio economic and agro climatic conditions without any project interventions were selected. In these control villages, 84 individual farmers were contacted.

In total, 50 WUAs and 307 individual farmers were contacted for the impact study.

### Salient findings

- More than 63 percent of the farmers in the project area reported that one or the other kind of work has been executed in the tank/canal in their area. WRD Officials visited the farmers, consulted with them, helped in the formation of WUA and they continue to meet the farmers to discuss water management issues in one eighth of the villages/tank ayacut, as reported by farmer groups. Officials visited and consulted farmers and helped them to form the WUA. Regarding restoration work required for the tank/canal, in almost 47% of the tank ayacut/villages the WRD officials carried out the work
- Visit and interaction of officials from the departments including Agriculture, Horticulture, Tamil Nadu Agricultural University, Agricultural Engineering and Agricultural Marketing with the community also was more frequent in the project area compared to the non project area. They did it very often and discussed with the farmers about demonstration plots of SRI, various hybrid crops, farm ponds, shade net, micro irrigation systems, commodity group etc according to 18.75% of the groups, and according to another 16% farmers, besides discussing these issues the officials

encouraged the farmers to participate in the demonstration farms/units. In 25% of the villages, according to the farmers, the officials visits very often and discuss issues related to water management.

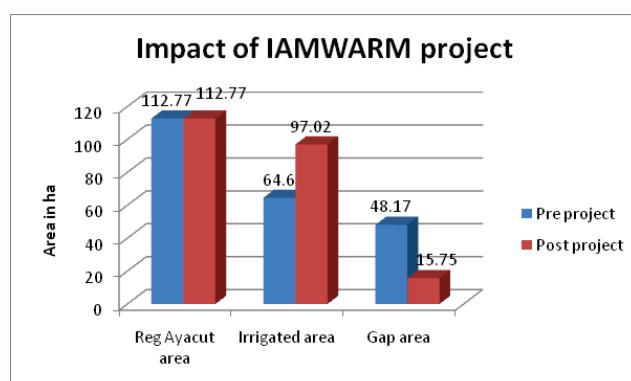

- More than 40% of the farmers were able to use modern irrigation technology, and hence got a good yield. Nearly 10% found that due to project intervention, they got sufficient water, used modern irrigation technology, got good yield from the farm, and used the saved water for another crop. In the area where there is no project intervention, farmers in the 95% of the tank/ayacuts did not have water, hence there is no cultivation, or used the insufficient water through traditional irrigation methods and got poor yield.
- Maize cultivation was also equally prevalent as paddy, in the area and the number of maize farmers is more in the project area (30%) compared to the non project area (25%).
- Vegetables cultivation is more practiced among the project area farmers (22.87) compared to the non project area farmers (7.14). So also cultivation of banana with 2.38 and 9.87 percents respectively for non project and project areas.

- Millets, pulses and groundnut were cultivated by more farmers in the project area compared to non project area.
- More than 40% of the paddy farmers in the project area are cultivating paddy under SRI method where as in the non project area only 8.16% paddy farmers are adopting SRI. Paddy growers under SRI took 46.22 percent higher yield (7125 kg/ha) and resultantly a 63 percent high income (Rs 70209/ha) in comparison with conventional cultivators (4873 kg/ha and Rs 43061/ha).

## SMEC, Australia

A rapid study was taken in eight tank systems spread across seven sub basins. A quick survey was conducted in the selected tank systems to collect required data. The beneficiary households in the tanks are selected at random. Focused group discussions were also held with different stakeholders, followed by walkthrough surveys in the respective tank systems.

## Salient findings

Out of the total ayacut area of 112.77 ha, irrigated area got a spectacular increase from 64.6 ha to 97.02 ha in the pre project and post project phases respectively. The gap area got reduced from 48.17 ha to mere 15.75 ha.

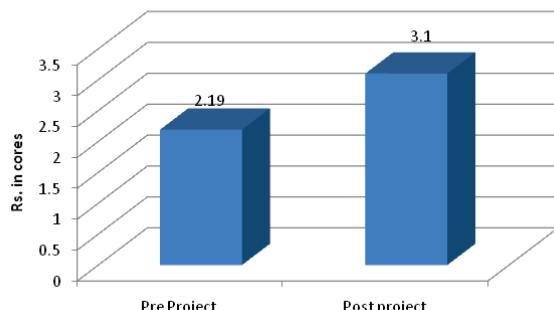

The block demonstrations covering 15 to 20 hectares in one year had a larger impact on adoption pattern of the farmers. In Vilacherry tank, SRI was demonstrated in 20 ha in the first year. About, 140 hectares were brought under SRI along with 20 ha demo area.

Animal husbandry interventions have helped a great deal in promoting healthy breeds of milch

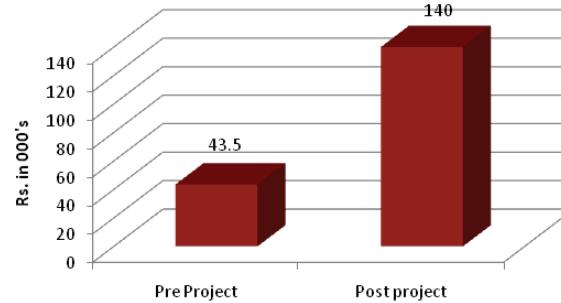

animals, sheep and goats. The milk yield has increased from 2 to 4 liter per animal. Green fodder development concept is very useful to the farmers and is catching up in the project tanks.

Gross value of agricultural produce in the tank system increased from Rs 2.19 crores before the project to Rs.3.10 crores (41.6 %) after the project. Also, the gross income from agriculture per family increased from Rs.43.5 thousand in the pre project situation to Rs1.40 lakhs in the post project scenario.

**Increase in gross value of farm produce**

**Increase in Gross Agri Income/family**

**STUDY TOURS**

## 4. STUDY TOURS

### Kenya – Delegation visit to IAMWARM

The delegation on study tour comprising 20 personnel including 12 from Kenya, two from Brundi, two from Japan and one each

from Ethiopia, Lesotha, Tanzania & Zambia had a glimpse of the IAMWARM Project implementation in Tamil Nadu. The team arrived Chennai on 23.06.2010 with the

main aim of studying the IAMWARM related activities and to learn the art of convergence by the various departments in the sub basin frame work. The team had discussions with

the various departments' heads to know about the smooth functioning and implementation of the various activities in a convergence mode.

They visited the Varahanadhi sub basin for two days. They have seen how the water service delivery has been improved with rehabilitation of Water-bodies and how the Agriculture Intensification and Diversification had been made possible through demonstration of SRI, Precision farming, use of farm implements and mechanization in various crops. The visitors virtually saw the concept of crop diversification

with Horticulture crops to achieve the water use efficiency. They were also impressed with the functioning of Agri Business centre at Kooteripattu

with the participation of WUAs and the ICT based dissemination of technology, professing to adopt these in their Countries.

The team was amazed with the process of behavioral and organizational changes being undertaken by the project and appreciated the role of various departments to fulfil the community demand. This Programme was organized by CEC.

### **Ethiopian Journey to IAMWARM in TamilNadu.**

A total of 10 Government staff from the Federal Ministry of Agriculture, Ethiopia involved in the Agriculture Growth Project visited the IAMWARM Project for three days from

30.11.2010 to 02.12.2010. The Ethiopians are implementing such similar programme in their country. IAMWARM Project was selected based on its highly impressive outcome indicators in the design of the Project. CEC

has arranged complete logistics for the visit.

The entire Programme was tailored to their requirement which was made known by the data collected through the questionnaire that was sent in advance of their departure.

The delegation had an opportunity to study improved water service delivery through rehabilitation of Water-bodies and the demonstrations of the System of Rice Intensification (SRI) and other departments' initiatives to improve water use efficiency in Agriculture through Intensification and Diversification and in other allied sectors. To them the Convergence of various departments involved in the IAMWARM Project was much amazing.

The MDPU team in collaboration with CEC (Centre of Excellence for Change) had organized an exhibition depicting the success through various departments. The guests had first hand exposure on success stories of IAMWARM activities like the rehabilitation of the existing tank system, improved yield of SRI, functioning of Agri Business Centre with the participation of WUAs, E-Velanmai, ICT based Agricultural extension models viz., Touch screen etc in Varahanadhi sub-basin in Villupuram District.

A video film "Neerundu Nilamundu" highlighting the change initiatives under the project towards improving irrigation service delivery, convergence and community participation was viewed by the visitors with immersed attention..

**CHANGE INITIATIVES**

## 5. CHANGE INITIATIVES

### TN IAMWARM as Technology Partner with Civil Society

The Centre of Excellence for Change (CEC) Chennai a partnership of professionals working in water and food sector organized an international Conference cum workshop on Water Partnerships towards meeting the Climate Challenge at Chennai on 6th&7th January 2011 with technical support drawn from IIT, Madras, International Water Management Institute Srilanka, Reclaim Public Water, Brussels, UNICEF India, UN-Habitat and UN Water.

The CEC invited TN-IAMWARM to be one of the Partners for providing technical expertise (Designing the Workshop & Sharing the best practices). The conference aimed to establish a Water Partnerships platform to help and share problem solving knowledge amongst the various Water Utilities and stakeholders as well as undertake match making exercises between Challenges and agencies with experience in specific resolutions. The TN IAMWARM provided the technical support to the conference design and shared the learning from the Project. The TN IAMWARM got widest appreciation from the participants for the creative and innovative practices in IWRM methodology. His Excellency Dr.APJ Abdul Kalam former President of India in his Special Address

"Recently I met the group of engineers and government officials under the leadership of Mr. Vibu Nayyar IAS at Rajbhavan, Chennai on 10 Nov 2010 night 11.00 pm. We had a discussion up to 12.30 AM in the night. What were amazed to me were the enthusiasm and the working spirit of the government officials from various departments in unison under the Centre of Excellence for Change movement. I would like to narrate what I have gained from that experience. I came to know

about the project called IAMWARM (Irrigated Agriculture Modernisation and Water-Bodies Restoration and Management). The objective of the project is to improve irrigation service delivery and productivity of irrigated agriculture with effective integrated water resources management in a river basin / sub-basin frame work in Tamilnadu. The project was to be executed over 6 years starting 2007. With an outlay of US\$ 566 million the project seeks to converge Water Resources Organization,

Agriculture, Horticulture, Agri. Engineering, Agri. Marketing, TNAU, Animal Husbandry & Fisheries Departments.

What is the unique situation that I have witnessed in this project is the integrated working together of 7 government departments and Tamil Nadu Agriculture University as its Research and development and training partner. I came to understand that they have implemented SRI (System of Rice Intensification) in 61000 hectares which is yielding more than double the normal productivity of Rice. 3.1 Lakh hectares have been brought under Ayacut Area modernization and 1.85 lakh hectares of Ayacut have been already modernized. Totally 817 tanks have been rehabilitated and 1059 tanks rehabilitation and Desilting is under progress. Around 4500 hectares have been brought under micro irrigation scheme. nearly around 1000 farm ponds were created. 1.38 lakh hectares of land has been brought under additional cultivation for horticulture products and they have trained around 2000 staff to provide service and training to the farmers and totally around 16000 farmers have been given training on all these activities." These observations inspired the participants and put the project on spotlight.

The conference achieved it's objectives to a fair measure and has a few firsts to its credit.

i).The Conference passed the Chennai declaration (Copy Attached) resolving to

establish the Water Organization Partnership of India (with GOI leadership)-with a suggested structure and plan of action. The Secretary DDWS GOI, Secretaries to Government in charge of Drinking Water and Chief Executives of PHEDs and Water Resources Departments are signatories to the declaration.

ii) It was one of the few occasions when Drinking water and Water resources were under one roof and they continued that relationship when it was decided that both the sectors would have a common platform

iii) UNDP, UNICEF India have indicated their in principle interest in supporting this process. Transnational Institute - Amsterdam have indicated their support with global research/information to be shared on the India platform.

The India Water Organisations Partnership is expected to deliver the following outcomes.

### EXPECTED OUTCOMES

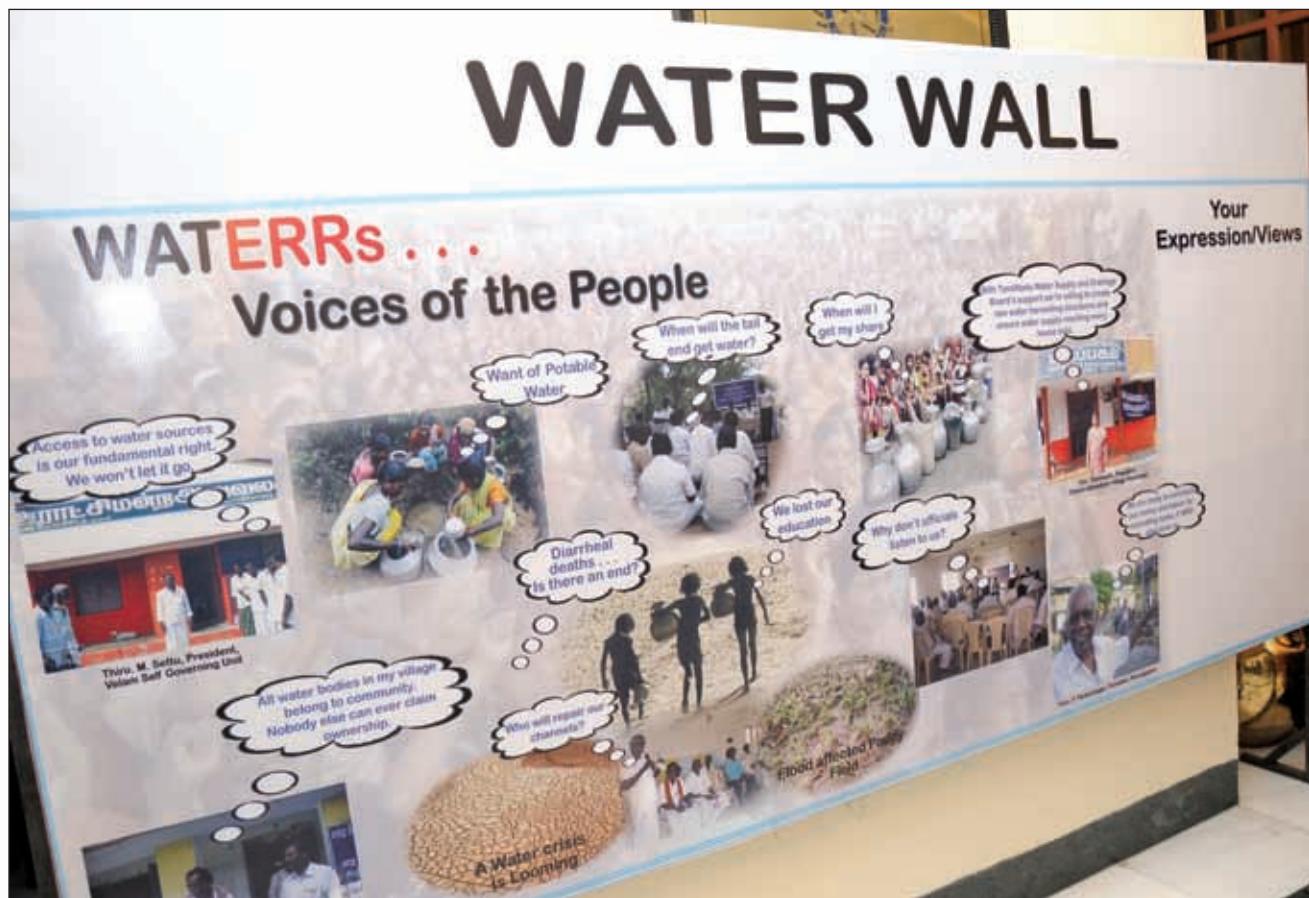

- A major network in the water sector of India
- As a national congress and platform for the various stakeholders in water sector to come together
- A Network of various stakeholders
- As a knowledge hub: best practices in water service delivery and resource management

is known/ recognized, including data and information, easily available/accessible and understood by everyone

- Improved performance by the public water operators, achieving the minimum, prescribed set of standards on water service delivery and resource management; citizens have better access to water
- Instituted “Water Awards” for best practices/best water operators
- Neutralize the critique of Public management by raising efficiency and effectiveness of the public water operators/best partnership

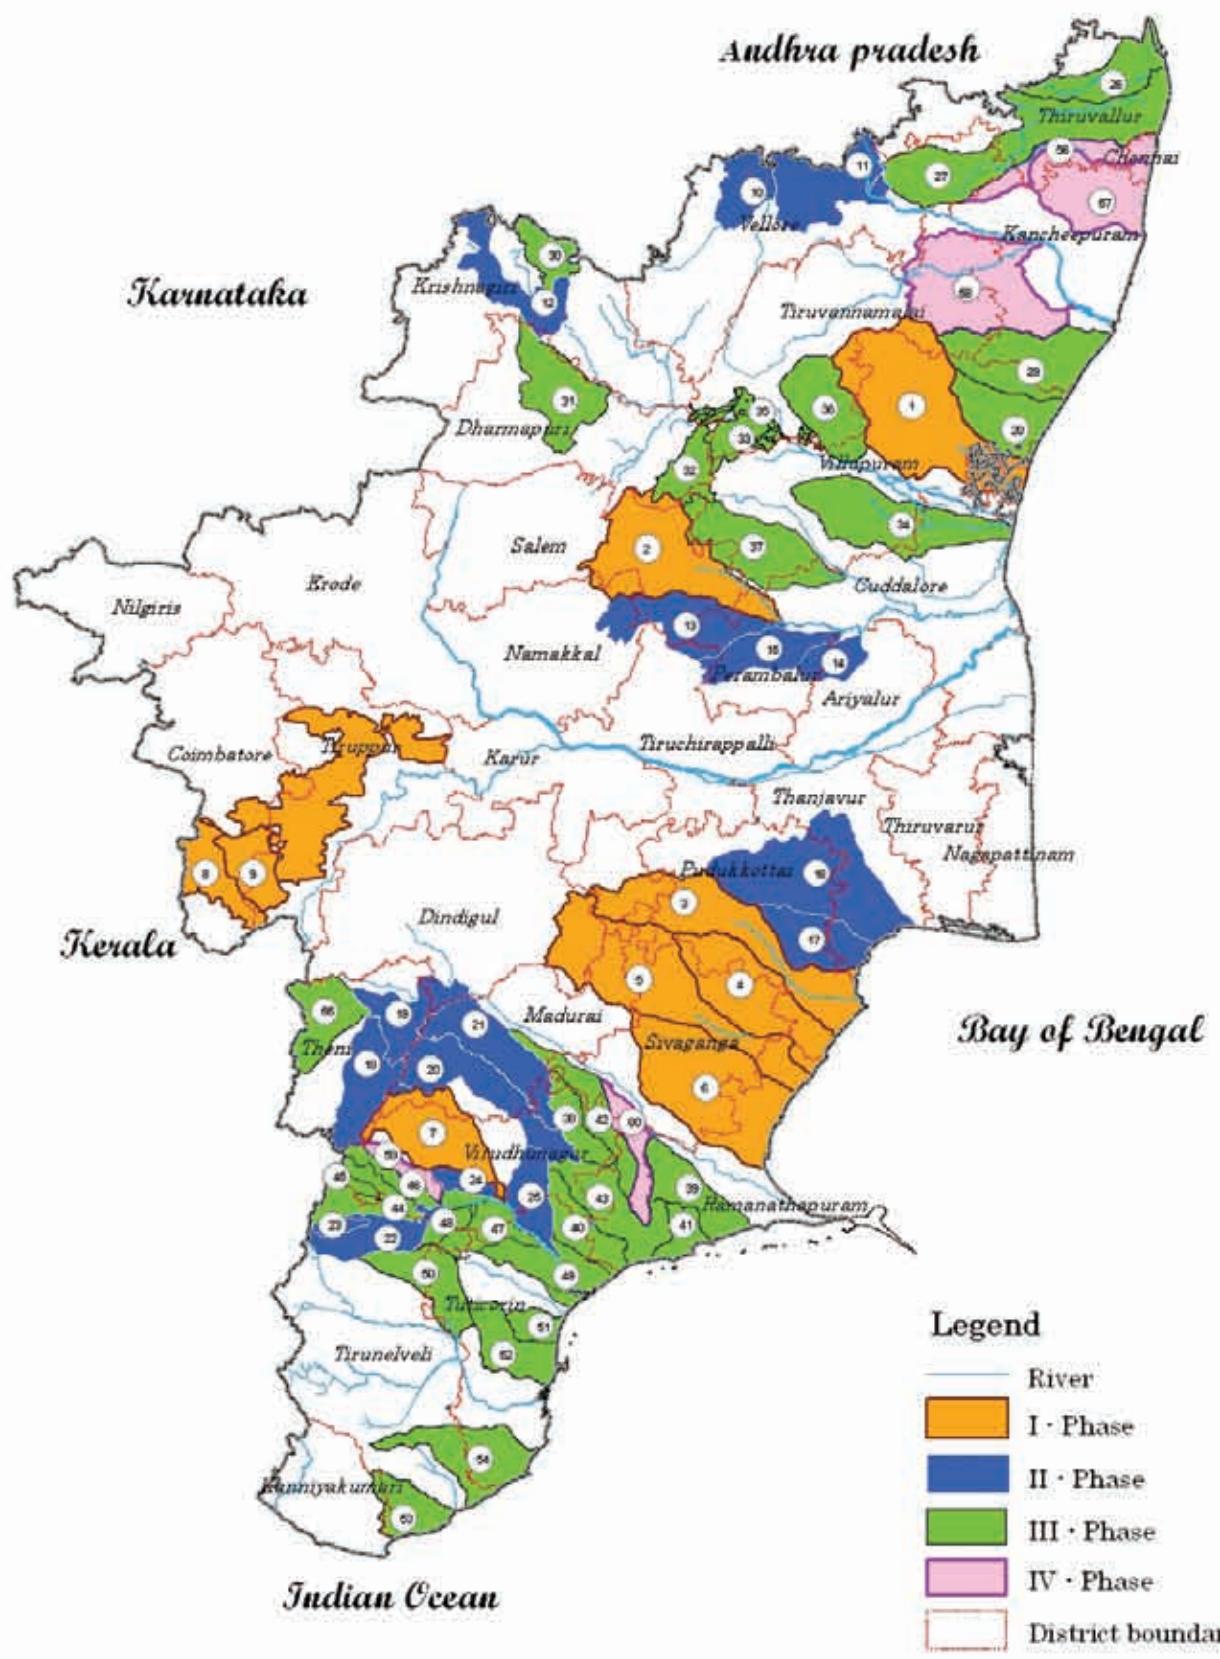

- An effective regulatory framework for public water service delivery and resource management, especially for water-scarce and quality-affected areas
- A Water Citizenship Charter is signed, endorsed and practiced by all members and individuals of the partnership/WOPs
- As an effective and inclusive moderator/facilitator among various stakeholders in the water sector (through a website, call centre etc.)

IAMWARM PROJECT  
Selected Sub Basins

### I Phase

1. Varahanadhi
2. Upper Vellar
3. South Vellar
4. Pambar
5. Manimuthar
6. Kottakkayarayar
7. Arjunanadhi
8. PAP - Aliyar
9. PAP – Palar

### II Phase

10. Koundinyanadhi
11. Poiney
12. Upto Krishnagiri (Ponniyar)
13. Swethanadhi
14. Anaivari odai
15. Chinnar
16. Agniyar
17. Ambuliyar
18. Upper Vaigai
19. Varattar - Nagalar
20. Upper Gundar
21. Therkar
22. Nichabanadhi
23. Kalingalar
24. Sindapalli Uppodai
25. Senkottariyar

### III Phase

26. Araniyar
27. Kosasthalaiyar
28. Nallavur
29. Ongur
30. Markandanadhi
31. Kambainallur
32. Kovilar (Kottapattikallar)
33. Pambanar Verattar
34. Gadilam
35. Pambar to Tirukoilur
36. Thurinjalar
37. Gomukinadhi
38. Kanal odai
39. Uthirakosamangai
40. Vembar
41. Palar
42. Girdhamal
43. Lower Gundar
44. Deviar
45. Nagarier
46. Sevalaperiyar
47. Uppathur
48. Vallampatti
49. Main River(Vaippar)
50. Uppodai
51. Hanumannadhi (Nambiyar)
52. Karumeniar
53. Salikulamer
54. Korampallam Ar.
55. Theniar

### IV Phase

56. Cooum
57. Adyar
58. Cheyar & Kiliyar
59. Kayalkudiyar
60. Paralaiyar

**Phase-I**  
**Aliyar Sub Basin**  
**IAMWARM Activity map**

**Departmental Activities (2009-10)**

**Agriculture**

- Paddy (SRI)
- Pulses
- Pulses (R.F)

**Fisheries (2007 Sustained)**

- Farm Pond
- Ornamental Fish Culture

**Agri-Marketing**

- Existing Regulated Markets
- Existing Shandies
- Existing Drying yard
- Proposed Drying yard
- Proposed Storage Shed

**TNAU**

- IPT-Rice fallow pulses
- SRI
- SRI (Green manure)

**Horticulture**

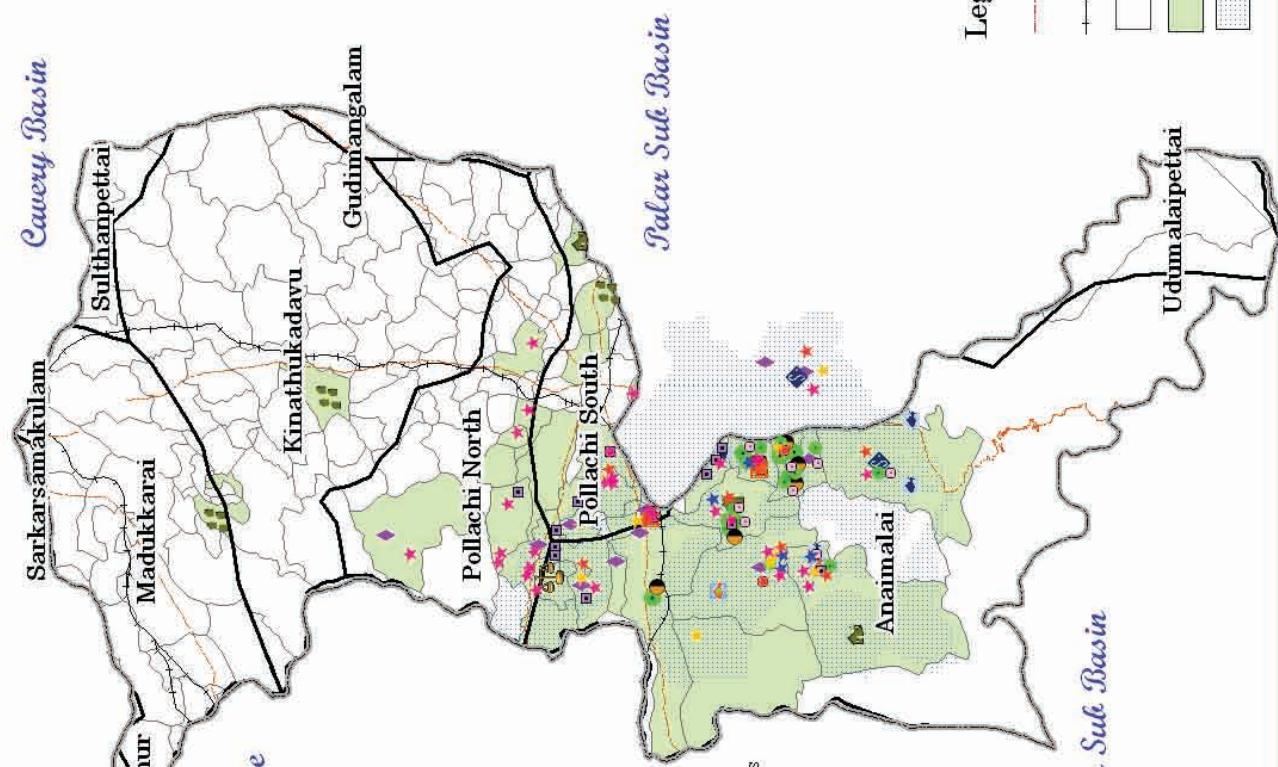

- ★ Bitter Gourd
- ★ Cocoa
- ★ Ribed Gourd
- ★ T.C.Banana
- ★ Fodder (Co3)
- Fodder (Maize)

**Animal Husbandary**

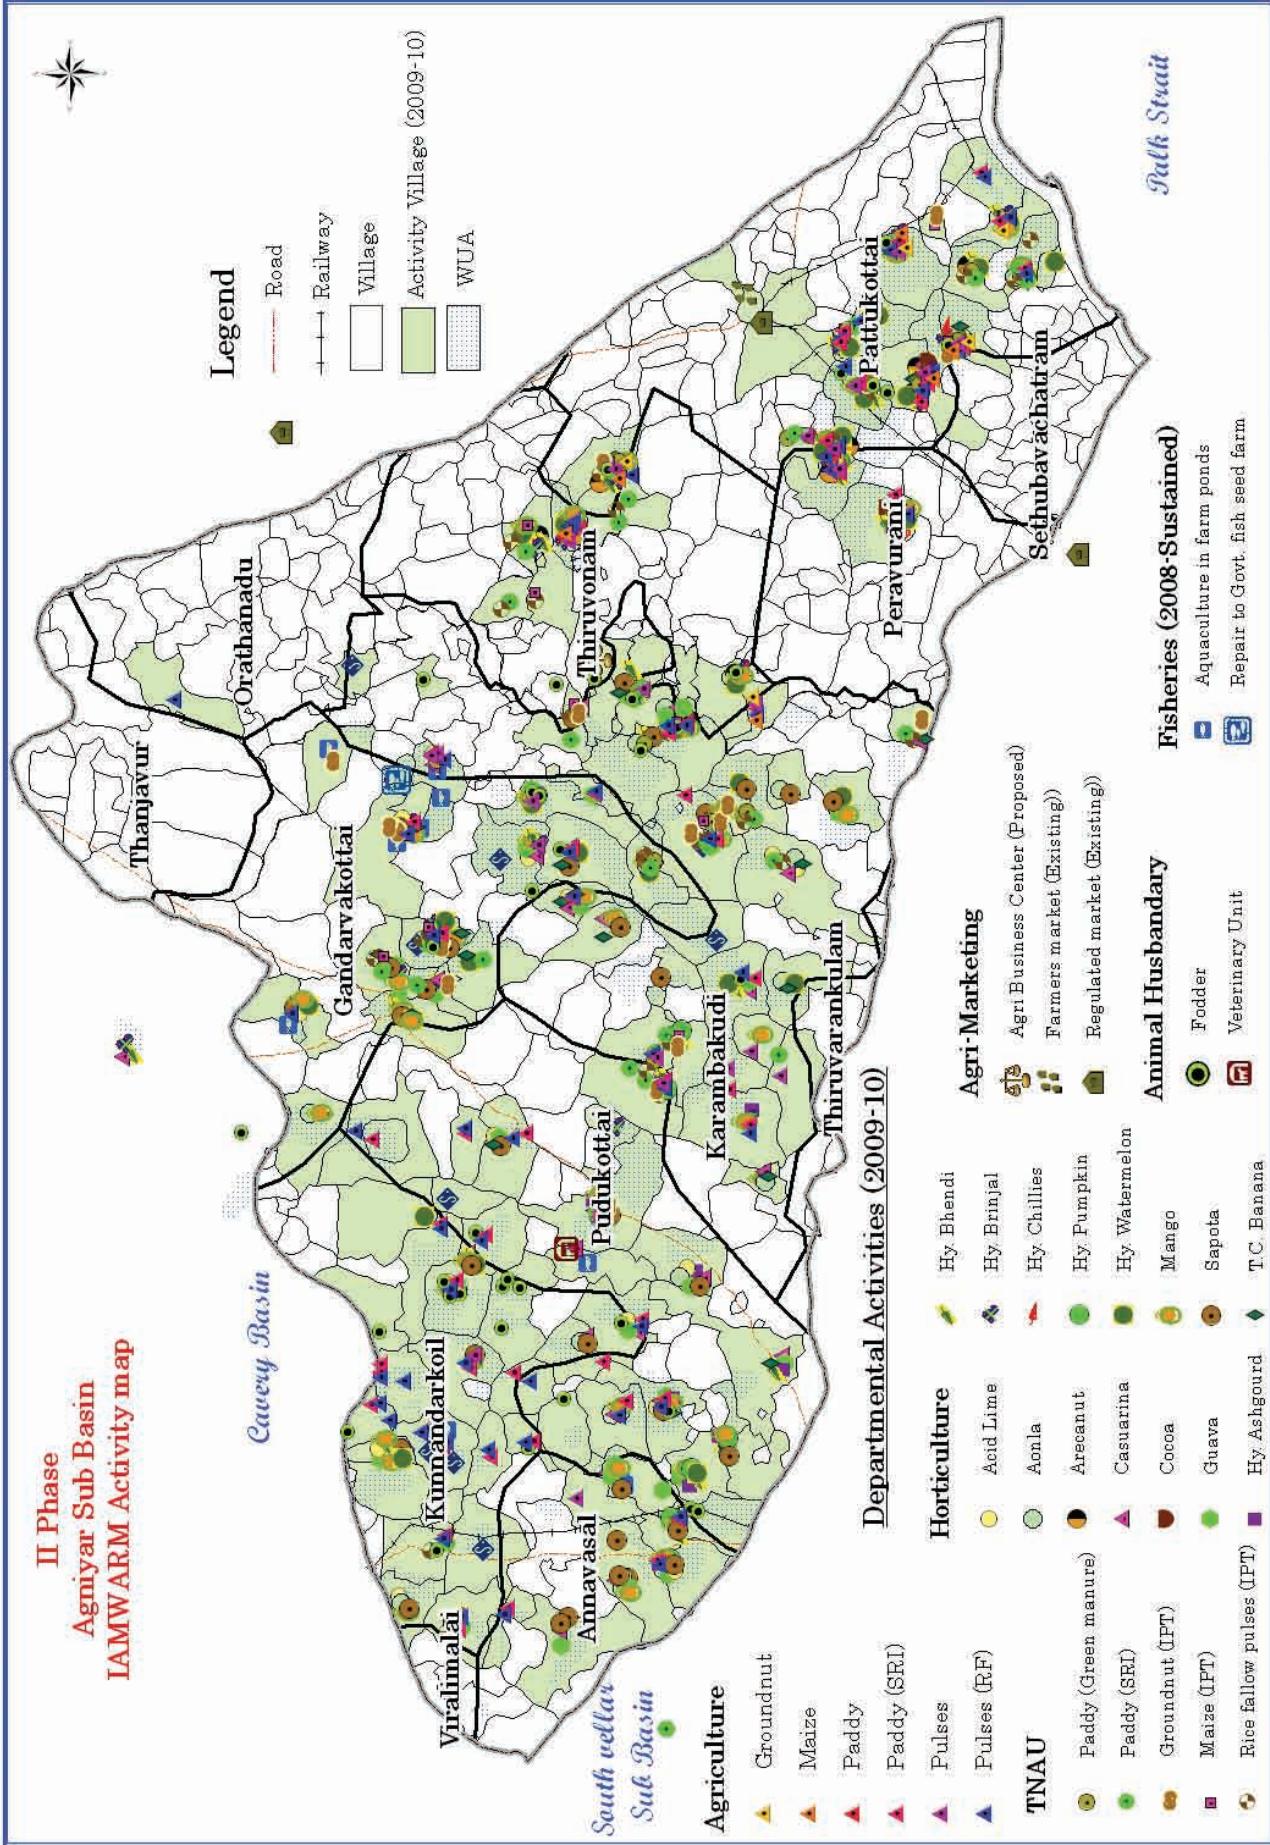

- Drip irrigation
- Sprinkler Irrigation

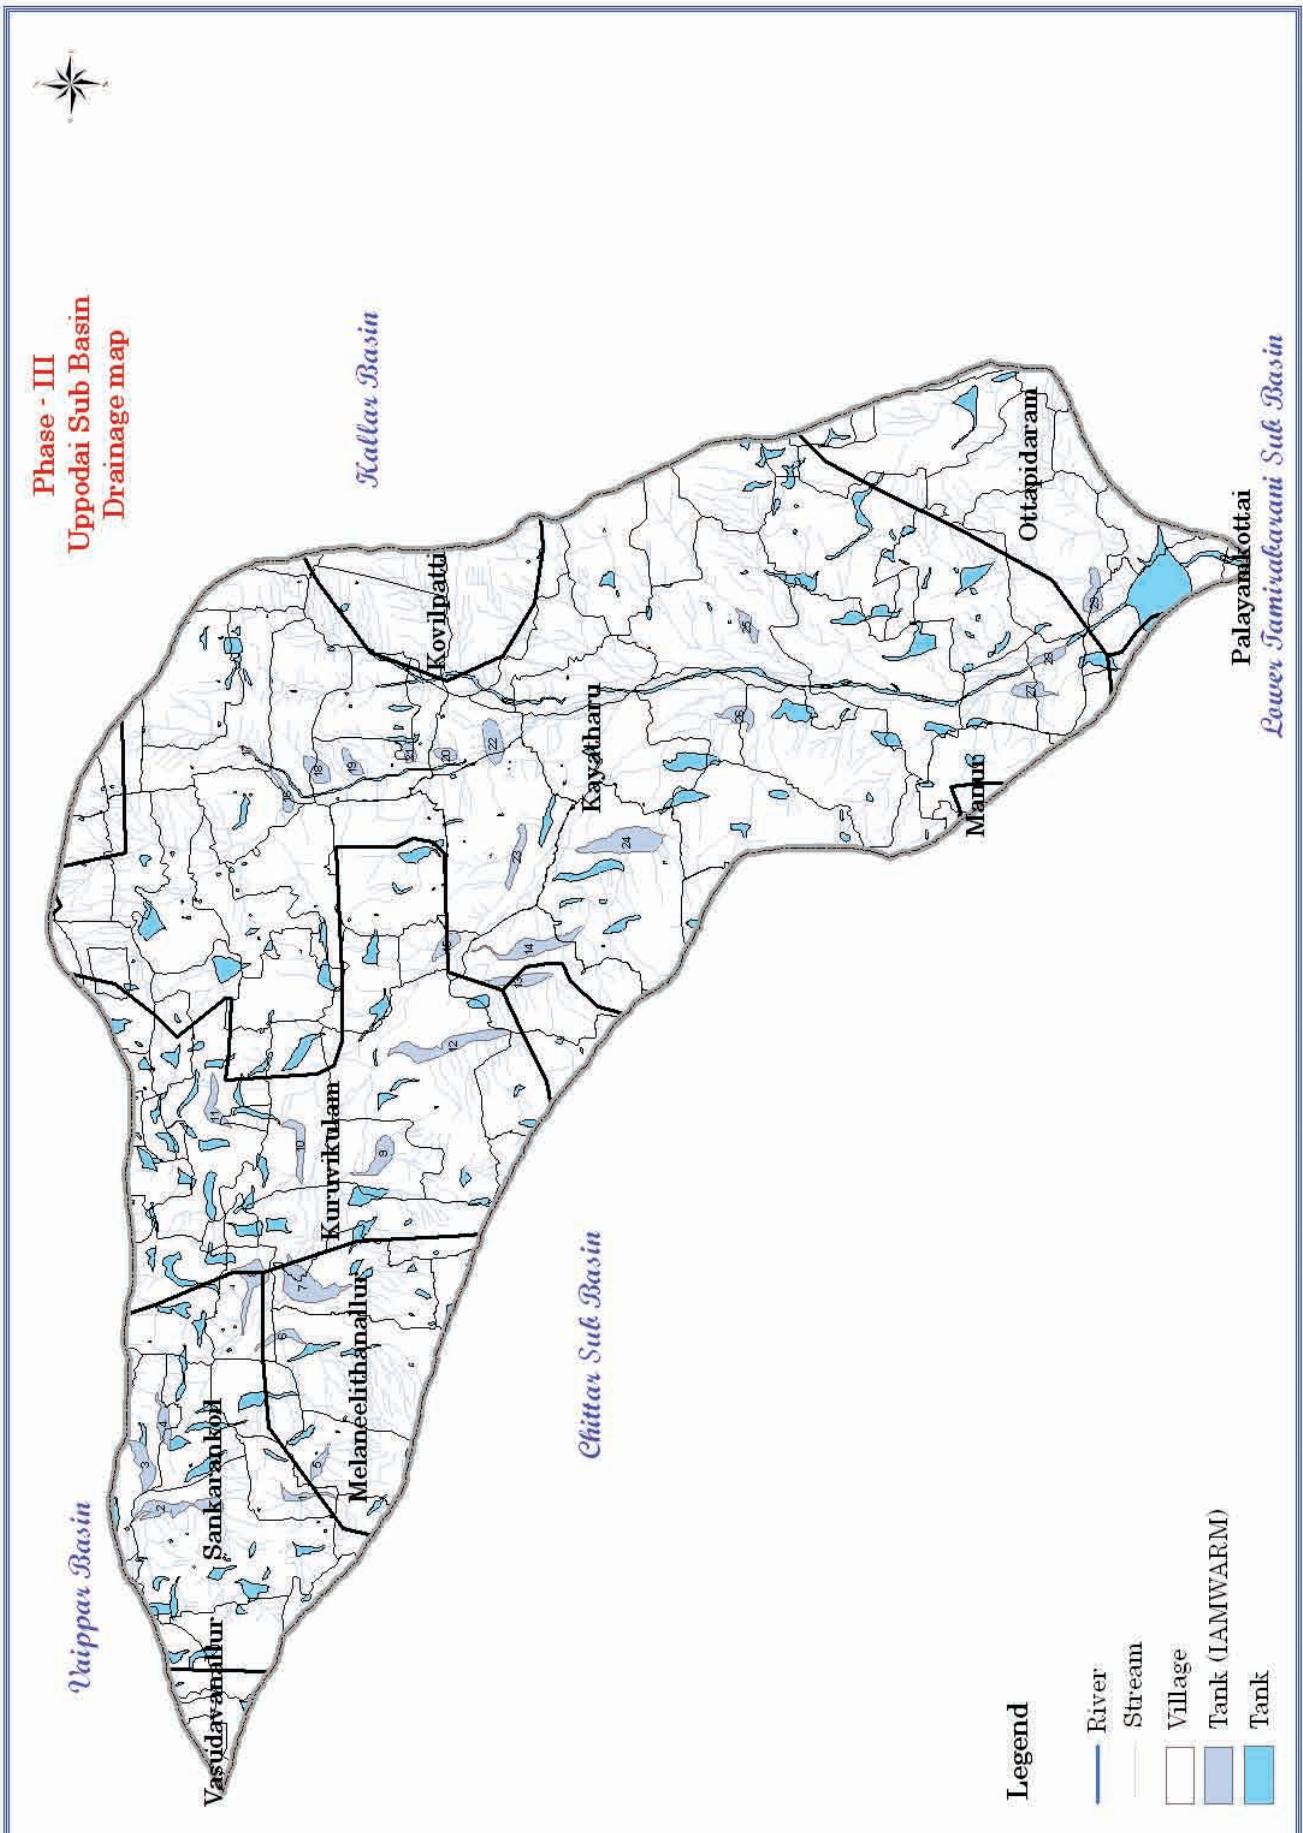

**Agri-Engineering**

- Activity Village (2009-10)
- WUA
