TN – IAMWARM PROJECT

UTHIRAKOSAMANGAIR SUB BASIN

WATER RESOURCES ORGANISATION

DETAILED PROJECT REPORT

1.1. INTRODUCTION

1.1.1. GENERAL:-

Agriculture is the dominant sector in the Indian economy Tamilnadu depends largely on the surface water irrigation, as well as the ground water irrigation . Faster growth in agriculture is central to sustainable development and poverty reduction in Tamilnadu .Given the importance of agriculture in the incomes of the poor in Tamilnadu, growth in agriculture could further reduce rural poverty through higher yield to agriculture producers , higher real wages to agriculture labours and increased income and employment opportunities with forward and backward links to the rural non-farm sector.

The state has used the surface and ground water potentials to the maximum limit and hence the future development and expansion depend only on the efficient and economical use of water potential and resources . To achieve higher water use efficiency , it is necessary to improve and upgrade the existing conveyor and storage systems and also to introduce modern irrigation methods.

With the above object , a comprehensive programme has been proposed with a multi Disciplinary approach.

1.1.2. DESCRIPTION OF THE GUNDAR BASIN

The river Gundar originates as Upper Gundar at an altitude of 1008m(MSL) near Chathuragiri Hills in Saptur reserve forest on the eastern slopes of western Ghats in Madurai District and run South- South east direction for a distance of 150km. and finally empties into Gulf of Mannar , The river basins is located between latitude 9^{o} 05' to 10^{o} 03 N and longitude 75^{o} 35' to $78^{o}35^{'}$ E having the drainage area of 5690 sqkm. This basin in surrounded by Vaippar basin on the South Western ghats and Vaigai river basin on the West & North and Gulf of Mannar (Bay of Bengal) on the east, Thekkar, Kanal odai ,

Giruthumal nathi, Paralaiyar and Vembar are its tributaries and the basin is diverted in to 9 sub basins namely as follows

1.Upper Gundar

2.Therkkar

3.Kanal odai

4.Giruthumal Nadhi

5.Paralaiyar

6.Uthrakosamangaiyar

7.Palar

8.Lower Gundar

9.Vembar

1.1.3. DESCRIPTION OF UTHRAKOSAMANGAIYAR SUB BASIN :-

Uthrakosamangaiyar sub basin is located on the North east side of Gundar basin which is formed from the surplus courses of many tanks fed by Vaigai river and Ragunatha Cauvery channel of Gundar and finally empty theirself in Gulf of Mannar .The sub basin area is 636.23 sq.km. covered by the portion of Paramakudi , Muthukulathur ,Kadaladi and Ramanathapuram taluks of Ramanathapuram District.

1.1.4 MULTI DEPARTMENT CONVERGENCE:-

This is important to ensure convergence around water and its productive use by various service Delivery organization which are the participating Departments in the project. Therefore a strategy of creating cluster in tank area has been devised and common activities in the villages falls under the clusters have been adopted.

15 clusters have been identified in this sub basin. The common convergence table indicates the Department wise inputs for the important area of every cluster as shown in the Convergence Table Annexure I & II.

1.2. HYDROLOGY

1.2.1. GENERAL:-

Uthrakosamangaiyar River is ephemeral one, which originate by the surplus course of 93 system tanks and 27 Non system tanks and also Raghunatha Cauvery channel of Gundar.

1.2.2. LOCATION:-

Uthrakosamangaiyar sub basin area is 636.23 sq.km. The Taluks covered in the sub basins are Paramakudi , Ramanathapuram ,Mudhukulathur , and Kadaladi of Ramanathapuram District.

Finally Uthrakosamangaiyar course drain in to the sea near Keellakkarai village. (Gulf of Mannar)

1.2.3. CATCHMENT AREA OF UTHRAKOSAMANGAIYAR SUB BASIN

The Uthrakosamangaiyar sub basin has a typical climate, owing to the full catchment area in plains . This sub basin enjoys the benefit of mostly North- East monsoon and slightly in summer season.

1.2.4. SOIL CLASSIFICATION:-

In this Sub basin , due to different stage , weathering and parent material , the soil types are met with in combination of vertisols , Inceptiols Alfisols. More prodominent type is vertisols

Inseptisol	Red (or) Brown (or) grey soils with surface horizon more deployed than sub surface , They are developing soils, moderately deep, coarse loamly to loam moderately drained to well drained	Suited for commonly grown crops with exceptions
Alfisols	The red (or) brown soils having accumulation of alleviated clay in sub surface horizon it well drained , poor water and nutrient holding capacity	Annual crop with shallow roots systems cum up wells
Vertisols	Block soil	Suitable for cotton, pulses etc

1.2.5. LAND USE PATTERN:

Sl.No	Land use Category	Percentage
1	Built up Land	0.55%
2	Crop Land	46 %
3	Barren &Uncultivated Land	28 %
4	Alkalinity / Salinity	11%
5	Other Fallow lands	14.45%

1.2.6. Hydro meteorology:-

The Hydro meteorology parameters include rainfall, temperature , humidity , wind velocity , evaporation and duration of sun shine which determine the climate of the sub basin.

1.2.7. RAINFALL:-

Average annual rainfall of gauging stations influencing this sub basin area as follows

Sl.No	Name of Rain Gauge station	North east monsoon (mm.)	Winter (mm.)	Summer (mm.)	South-West monsoon (mm.)	Annual (mm.)
1	Morekulam	589	63	112	70	834
2	Mudhukulathur	417	42	104	148	711
3	Paramakudi	399	37	96	182	714
4	Ramanathapuram	486	49	91	91	717
Total Average		473	48	101	123	745

a) Climate:- The Uthrakosamangaiyar sub basin lies in a low rainfall belt having an annual average rainfall of 745mm.South West monsoon contribute 123mm , while north east monsoon contribute 473 mm. This sub basin receives a major share of its rainfall

during North East monsoon. This monsoon helps to buildup storage in both the system and non- system tanks. The system tanks are also contributed by supplemental supply of 30% of their capacity from the Vaigai Reservoir whenever the storage credit is in full. For the measurement of Hydro meteorological parameters in the basin area , there is one weather station at kavalur and its data is taken for the study.

b) Land holdings:-

The details of farm holding and size classes prevalent in Uthrakosamangaiyar sub basin area given below.

Sl.No	Category	Size of Holding	Numbers	Percentage
1	Marginal	Below 1.00 ha.	4162	29%
2	Small	1.00-2.00 Ha.	7551	54%
3	Medium	2.00- 5.00 Ha.	2008	14%
4	Big	5.00ha. & above	392	3%
		TOTAL		100

Above table revealed that the small and marginal farmers form a bulk of 83 % in land holding in the sub basin . Development initiatives will need to take this fact into account.

1.2.8. DEMOGRAPHY:-

Name of Sub basin	Name of Blocks	Total no of Villages	Population in Million		
			2005	2010	2025
Uthrakosamangaiyar	Part of Paramakudi, Mudukulathur, Bogalur, Thiruppulani and Kadaladi blocks	88	0.144	0.154	0.182

Male :- 48 % Female:- 52%

Urban :- 2% Rural :- 98%

1.4. PARTICIPATORY IRRIGATION MANAGEMENT (PIM)

1.4. SALIENT FEATURES OF IMPLEMENTATION OF PIM IN UTHRAKOSAMANGAIYAR SUB-BASIN

1) **The Sub-basin:** This is one of the nine sub-basins of the Gundar River Basin. Totally 153 irrigation tanks are under the control of Water Resources Organisation (WRO) of Public Works Department (PWD) in this sub-basin. The list of tanks covered with brief details are furnished in the **Annexure – 1**. These 120 tanks are located within the sub basin's hydraulic boundary spreading over of 88 Villages of Paramakudi, Muthukulathur, Kadaladi and Ramanthapuram Taluks in Ramanathapuram District. **The total Command area under these 120 tanks works out to 8955.36 ha. (Annexure 1)**

2) **Command area:**

i. System tanks fed by Vaigai River	:- 6901.74 Ha.
II. Non-System Tanks	:- 2053.62 Ha.
Total	**:- 8955.36 Ha.**

3) **An assessment of number of WUAs.**

Associations	Nos	Villages	Tanks	Ayacut Ha.
1.WUA's already formed under WRCP	25	68	96	7313.31
II. WUA's proposed to be formed under IAMWARM Project	17	20	24	1642.05
III. Total command area	42	88	120	8955.36

4) An account of "Awareness creation".

Activities undertaken and "Walkthrough Surveys" carried out:

i) There are 120 tanks in the sub-basin spread over 88 villages.

ii) As detailed out in Annexure – I, all these villages were visited by the WRO officials and awareness about various activities, contemplated under IAMWARM project has been created.

iii) Details of villages covered, walkthrough surveys conducted, farmers attended, list of works suggested by the farmers, list of works analysed and finalized by WRO officials, are all furnished in the Annexure –.II & III.

5) Schedule of completion of delineation and preparation for WUA documents, comprising of:

i) Form – I : Details to be notified by District Collectors (End of Feb 2009)

ii) Form – II: WUA document to be notified by District Collectors (End of May – 2009)

iii) Completion of preparatory works for the conduct of Elections for WUAs (End of June– 2009)

6) Schedule for Conduct of Elections in the sub-basin for farming Management Committee will be completed by end of January 2010.

7) Supporting Organisations (Sos):

Initiating and completing the process of publishing EOI to hire Support Organisation at sub-basin level (End of June- 2009)

i) Providing Request for Proposals (RFPs) to all the short listed agencies, and obtaining Technical and Cost Proposals (Middle of August -2009)

ii) Selection and deployment of Support Organisation to the sub-basin (End of Sep- 2009)

8. Appointment and the Role of Competent Authorities:

i) Section 26 of the Tamil Nadu Farmers' Management of Irrigation Systems (TNFMIS) Act provides for the appoint of "Competent Authorities" to assist the respective farmers organizations (WUA, Distributory Committee and Project

Committee), in the implementation and execution of all decisions taken by such farmer's organization. Similarly, every farmer's organization shall extend such co-operation or assistance, as may be required by the Competent Authority, for carrying out all the tasks related to implementation of TNFMIS Act.

ii) For the 25 Nos. of WUA's formed under WRCP, there are Competent Authorities already functioning as listed below.

<table>
<tr><th rowspan="2">Sl. No</th><th rowspan="2">Details of WUA's in code</th><th colspan="2">Details of competent Authorities</th></tr>
<tr><th>Assistant Executive Engineer.</th><th>Section Officer</th></tr>
<tr><td>1</td><td>RMP:- 5,6,7,8 and 9</td><td rowspan="2">Asst. Executive Engineer, PWD/WRO, Lower Vaigai Basin Sub Division, Paramakudi.</td><td>Section Officer, WRO, Parthibanur Regulator section Parthibanur Regulator</td></tr>
<tr><td></td><td>RMP :- 10,11,12,13,14,15, and 16</td><td>Section Officer, WRO Parthibanur Regulator Section, Paramakudi.</td></tr>
<tr><td></td><td>RMP:- 40,41,42,43,44,62,68 and 69</td><td rowspan="3">Asst. Executive Engineer, PWD/WRO, Uthrakosamangaiyar Sub Division, Ramanathapuram</td><td>Section Officer , WRO Irrigation section Uthrakosamangai</td></tr>
<tr><td></td><td>RMP:-47,58 and 61</td><td>Section Officer , WRO Irrigation section Chathrakudi</td></tr>
<tr><td></td><td>RMP:- 55 and 63</td><td>Section Officer , WRO Irrigation section- I Thiruppullani</td></tr>
</table>

iii) It is proposed to form 20 WUAs only under IAMWARM Project to cover a command area of 1686.79 ha.

iv) Appointment of Competent Authorities for the WUAs proposed to be formed under IAMWARM project is based on the "WRO Section officer wise" distribution as indicated below.

Sl. No	Details of WUA's in code	Details of competent Authorities	
		Assistant Executive Engineer.	Section Officer
1	UKI – 1	Asst. Executive Engineer, PWD/WRO, Lower Vaigai Basin Sub Division, Paramakudi	Section Officer , WRO Parthibanur Regulator Section, Paramakudi.

2	UKI – 11	Asst. Executive Engineer, PWD/WRO, Uthrakosamangaiyar Sub Division, Ramanathapuram	Section Officer , WRO Irrigation section Chathrakudi
3	UKI 12,13,14 15,16		Section Officer , WRO Irrigation section Thiruppulani
4	UKI -2,3,4,6,7,8 and 9	Asst. Executive Engineer, PWD/WRO, Gundar Basin Sub Division, Muthukulathur.	Section Officer , WRO Irrigation section - I Muthukulathur
5	UKI -5 and 10		Section Officer , WRO Irrigation section - II Muthukulathur
6	UKI – 17		Section Officer , WRO Irrigation section - I kadaladi

9. Involvement of farmers in the preparation of “Scheme Modernisation Plans”.

i) Based on the outcome of the “Awareness Creation Programme” and Walkthrough survey carried out with the involvement of farmers, a list of tasks proposed to be taken up for “Modernization” under IAMWARM project was discussed with 1133 numbers of farmers from 24 groups of villages and the tasks was also prepared and exhibited in the Notice Board of the Village Administrative Officers Office and Panchayat Office.

ii) During the meeting, the farmers present were also informed that soon after finalization of contract for carrying out “Modernization of Irrigation Systems” a “Notice Board” with the details about the nature of works, its cost, period of contract and Name of the contractor will all be fixed at the site of the work, as well as in the Panchayat Office, for information of the farmers. They have also been informed that they are free to supervise the work by the contractor and any lapse in the quality of work may be

reported to the field officers of WRO, as well as the Executive Engineer of WRO, who has been designated as the Nodal Officer for the sub-basin concerned.

iii) The field officers of WRO have all been informed about the problems in handing over the operation and maintenance responsibilities to the farmers concerned, if the tasks as desired by them are not included in the modernization of the system and also in case some of the tasks already planned are not implanted due to some reasons or other.

iv) The WRO officers were also informed that hey are personally responsible for handing over the irrigation systems after completing the tasks related to modernization of Irrigation systems.

10. Current status of Recovery of water charges:

i) An enquiry conducted with the "Village Administrative Officers" (VAOs) of randomly selected villages, the normal water charges recovery as informed by the VAO, works out to 50-60% only, about the expected percentage of 80-90%.

ii) With the proposal to form new WUAs under IAMWARM in "Uthrakosamangaiyar Sub-basin", the Managing Committee **will be trained** to take up the responsibility of improving the **Water charges recovery percentage.** These will be followed up, after completing the modernization tasks and handing over of the O & M responsibilities to WUAs.

11. "Capacity Building" of the WUA farmers:

i) The "Support Organisation Group" will prepare "Training Modules" required for **building the capacity** of the WUA farmers, based on a "Training Needs" Analysis. They will also organize various "Capacity building" programmes at **suitable locations** within the sub-basin command area, to benefit the farmers of the WUAs in the sub-basin.

ii) The "Support Organisation" will also arrange for organizing the **"Study Tours" both within and outside the state** to enhance their knowledge

and experiences which will help them **to improve the crop productivity** and there by the farmer's income.

iii) The Support Organisation will also conduct necessary "Awareness programme" and impart training to educate the farmers of the WUAs in all aspects of the TNFMIS Act, TNFMS Rules and Election procedures for constituting the "Managing Committees" of the WUAs.

12. The "Competent Authorities" appointed for the **sub-basin** will also be trained to effectively to interact with WUA farmers and maintain good support and relationship with the farming community in the sub-basin. .

Annextue - 1

ABSTRACT ON THE DETAILS OF IRRIGATION INFRASTRUCTURE AVAILABLE AND WORKS TAKEN UP UNDER IAMWARM PROJECT

Name of Sub Basin: Uthirakosamangaiyar

Sl.No	DETAILS	ANICUT			SYSTEM TANK			NON - SYSTEM TANK			ANY OTHER SUPPLY CHANNEL		REMARKS
		NOS	SUPPLY CHANNEL IN KM	DIRECT AYACUT	NOS	SUPPLY CHANNEL IN KM	AYACUT	NOS	SUPPLY CHANNEL IN KM	AYACUT	LENGTH (k.m)	DIRECT AYACUT	
1	Available infrastructure in sub absin	-	-	-	93	202.58	6901.74	27	56.40	2053.62	-	-	-
2	infrastructure excludeed in IAMWARM project since works carried out under various scheme from 2000	-	-	-	7	133.62	1058.08	4	6.30	239.41	-	-	-
3	Infrastructure that does not require any rehabilitation works	-	-	-	-	-	-	-	41.90	-	-	-	-
4	works taken up in IAMWARM project.	-	-	-	86	68.96	5843.66	23	8.20	1814.21	-	-	-

1.Certified that the Panchayat Union Tanks are not considered in this project.

2.Ceritified that the components of the tanks executed under various schemes (Viz, IWRM , WRCP I , NABARD , PART II schemes etc.,) since 2000 were not proposed in this project.

1.6. REHABILITATION OF IRRIGATION INFRASTRUCTURE

1.6.REHABILITATION OF IRRIGATION INFRASTRUCTURE:-

The actual constraints & deficiencies in the sub basin area and the action taken by WRO for their remedial measures are narrated below.

Component	Category	Constraints and Deficiencies	Countermeasures by WRO
Conveyor System	Catchment Area	NIL	NIL
	Anicut	NIL	NIL
	Flood Carrier Supply channels and their cross masonry works	• The existing supply channels of Vaigai system tanks and the flood carrier , its feeder channel to non system tanks have lost their carrying capacity due to heavy setup and accumulation of jungle growth • The control structures at off take points are in full damaged condition .There are no control structures at some off take points to regulate the supply to tanks • Channel bunds are damaged by village people and small vehicles wherever village roads are crossing • Boundaries is to be demarked to avoid encroachment	• Desilting the Supply channels & flood carrier using machineries • Providing Bed bars at an interval of 200m in order to maintain the bed level in future • Protection walls are to be constructed at vulnerable reaches • The existing damaged control structures such as off take sluices, Dividing dam etc are to be reconstructed. New control structures are to be constructed at open off take points with shutter arrangements. • C.T.Culvert are to be constructed wherever necessary • The boundaries of the channel is to be demarcated by fixing R.C.C. pillars

Storage system	Tanks	• The tanks have lost their designed capacity because of heavy sit up in bed and poor standard of bund along with thick jungle growth • Due to dilapidated (or) repaired condition of the sluices and weir , there is uncontrolled delivery from the tank resulting to water loss. • Encroachment is made at few places.	• Tank bund area to be fully standardized using machineries along with consolidation with power rollers • Providing free board of 1.50m for bund whose height is above 3m • Providing Turfing to rear slope of bund • Providing protection walls at vulnerable reaches with cattle cross arrangements • The dilapidated sluices and weirs are to be reconstructed which control water delivery from tank into command area • Providing plug and plug rod arrangements to sluices and S.G shutters to scour vents of weir • Providing measuring devices for better water management • Providing R.C.C pillars to demarcate the boundaries of tank bund
	Irrigation Management	• Over drawl of water in the head reaches irrelevant to the actual needs of crop Leads to considerable loss of water • Non possibility of equal distribution to tail end arises conflict among the farmers • Water Budgeting.	• Evolving a cropping pattern and arriving at the water demand matching with the water availability (Storage position & Season rainfall forecast) during the cultivation period. • Water distribution is to be planned and scheduled based on actual crop water requirement cropping pattern,effective rainfall and available storage in the tanks.

			• Farmers training and awareness development to be carried out for economic and effective utilization of water in the command area in order to improve irrigation efficiency • Formation of WUAs and their effective functioning , is to be encouraged to entertain better water management as pointed above.
	Agricultural practice	• Traditional old practice is being adopted by the farmers • Non adoption of proper cropping pattern • Water balance for agriculture purpose is under deficit.	• Extension of modern agricultural technology is to be explored for increasing the productivity in profitable crops. • Suitable cropping pattern is to be adopted for devising the optimal benefit using less unit of water • Conjunctive use of ground water in sources wherever possible is to be encouraged among the farmers

Vision for Ramanathapuram District under IAMWARM Project.

- To improve the socio –economic status of the poor
- Water for life existence
- Ensure food for all living being (human and Animal population)
- Boosting food production and eradicating poverty
- Irrigation Development
- Sustainable , economically viable and optimal production with minimum resources
- Uplifting the standard of life of farmers
- Increase the cattle population and milk production
- Increased green fodder cattle population

- Profit oriented crop diversification
- Informed farmers

Expected Out come:-

1.Increase in conveyance efficiency by 10% (From 43 % to 53 %)

2.The present Gap area of 1051.63.Ha. is to be converted as a fully irrigated water.

3.The following irrigation infrastructure development works area implemented in the sub basin.

a) Rehabilitation works of supply channel for 104.45Km.

b) Rehabilitation works for 109 tanks.

Details of proposals in each infrastructure of the Sub Basin

PACKAGE 1

Calculation of machineries Requirment

Engaging Hydraulic excavator
3no. & 12 Tippers = 12 Hours/ Day

= (20 no X 2 loads X / hour X 12 Hr. X 4 m3 /trip)

= 1152 M^3/ Day

For 1 Month (20 Working Days) = 23040 m^3

= 23,040 m^3 / month

Total Quantity of earth work = 204300 m^3

= 9 months+3 months rainy season

Machineries required for earth work:

Hydraulic excavator = 3 nos

Tippers / Lorries = 12 nos

Power roller = 4 nos

Vibrated compactor = 1 nos

Water Lorries = 2 nos

Mixer Machine = 2m3 / hour For 6 hours/ day 36 m^3/ day

Total quantity of concrete = 8625 m^3

Mixer Machine required = 3 nos 12 months

Material conveyance			Tipper / Lorries	
Cement	10	mt / Trip	1 trip/day	10 mt/ Day
sand	5.7	m3 /Trip	2 trip/day	11.32 m/ Day
Metal / stone	5.6	m3 / Trip	3 trip/day	16.8 m3/ Day

Total Quantity of cement	=	2270	Mt			
Tippers required for conveyance	=	2270	/	10	=	227 Tippers
Total Quantity of sand	=	4358	m^3			
Tippers required for conveyance	=	4358	/	11.2	=	389 Tippers
Total Quantity of Metal	=	8626	m^3			
Tippers required for conveyance	=	8626	/	16.8	=	513 Tippers

Environmental Monitoring on water and soil quality and creating awareness & updating of "Environmental and Social Assessment report" for UTHIRAKOSAMANGAIYAR Sub basin .

Estimate Cost Rs 17.70 Lakhs

INTRODUCTION

Under TNWRCP, with World Bank assistance, special emphasis was given to WRO, to assess the environmental status and degradation caused for all River basins in Tamilnadu.

The Environmental cell of WRO assessed Soil and Water samples in this River basin. The assessment includes Environmental impact on the quality of surface, ground water and soil by collecting water & soil samples and testing them. Moreover, "preparation of Micro Level Environmental Status Reports" all the River Basins has also prepared. These works have been carried out with the World Bank Assistance upto March 2012

Also few Awareness programs & Workshops were conducted to create awareness on the Environmental issues & remedies among the public, farmers, Govt. officials and NGOs. Seminars were conducted to find out new techniques and methods developed recently to solve Environmental problems.

Now under IAMWARM project, focus is at each sub basin level to identify and prioritize the requirements for improvements to storage structures, rehabilitation, new schemes for water harvest, and diversification of crops. Any new schemes or rehabilitation of existing one, consideration of the environment issues pertaining to that area and remedial action to overcome the problems is must.

DESCRIPTION OF SUB BASIN

Gundar river basin is one of the major river basin in Tamilnadu with a drainage area of 5912 sq.km. Total length of the river from the origin is 150 km. The basin covers part of **Madurai, Sivagangai Virudhunagar**, part of **Dindugal, Ramanathapuram and Thoothukudi Districts.**

The Gundar basin diverted into nine sub basins. Among the nine sub basin Uttaragosamangaiyar is the one of the important sub basin. Uthirakosamangaiyar is a ephemeral river.

The sub basin is located on the north east side of **Gundar basin** which formed by the surplus courses of many tanks fed from Vaigai river and Ragunathacavery channel of

Gundar. It finally empties in **Gulf of Manner.** The sub basin area is **636.23 sq km**, it covers **Paramakudi, Muthukulathur**, **Kadaladi Ramanathapuram Taluks of Ramanathapuram District.**

ENVIRONMENTAL PROBLEMS IN THIS SUB BASIN

INDUSTRIAL POLLUTION

There are no major industries situated in this sub basin. Only small-scale industries are there in this sub Basin.The effluent discharge is minimum and meager**.** The details of Industries and their effluent discharge are given in Annexure-III.

However, the effluents discharged from the industries are closely monitored by TNPCB. Any further activity to minimize the effect of pollution on water bodies will be dealt by the TNPCB.

CATCHMENT DEGRADATION

No reservoirs are there in this sub basin. Soil erosion is there in the riverbeds of this sub basin. In respect of prevention of soil erosion, effective measures were taken up by the Agricultural Engineering Department. However Agricultural Engineering Department will give proposals to prevent further soil erosion. Other major environmental issues polluting Water resources pertaining this sub basin are listed below.

SOLID WASTE DISPOSAL

There is no organised scientific method of disposal in all the Municipalities, town and Village Panchayats. The garbage is dumped in the basin area and hence the harmful chemical substances of the landfill seep through and reach the ground water reservoirs and contaminate these sources.

Scheme for Solid waste Management plan is under implementation by Rural Development Department. Under this scheme, collection tank for disposable and undisposable garbage have been constructed. But in most of the panchayats, recycling the waste and converting the solid waste into manure and production of energy is yet to

come up. Hence motivating the local bodies for proper implementation of solid waste management project is must.

SEWAGE DISPOSAL LET INTO WATER BODIES

Treatment of sewage and arrangements for safe disposal arrangements has not been provided in most of the Villages. Underground drainage arrangements have not been provided even in municipalities and town panchayats. This sewage is washed away and got pounded in the backwaters and unhealthy conditions exit.

The locations of disposal of sewage directly let into water bodies in this sub basin are furnished in Annexure II.

So, creating awareness among the presidents of the local bodies is must and to motivate them to adapt Solid waste management and Sewage management, wherever required, workshop including field visits, exclusively for them is to be conducted under the IAMWARM project**.**

WATER WEEDS

"Prosopis Juliflora" plants are multi-stemmed shrubby bushes growing from 3m to 15m tall. *Prosopis Juliflora"* has been known to send its roots 10, 20 or even 30m to catch water. The roots lift water much higher than it can be lifted by capillary action of the soil. The draft on water supply is greatest during a long, hot growing season, with scanty precipitation and low humidity.

Prosopis Juliflora" has invaded the cultivable lands in **Uthirakosamangaiyar,** in the beds of almost all the tanks. Hence, these plants need to be eliminated totally for the conserving precious water resources. But on the contrary, in some villages local people desire to grow this plant in the water spread area of the tanks. Once in 4 or 5 years they get cutting order from the revenue authorities, sale the Juliflora or coal produced from it and keep the money for the common expenses like court case for the litigation with the nearby villages, temple repair and Local festivals etc. This is on account of lack of guidance and ignorance of its ill effects. Hence, this problem has to be addressed in all forms, wherever possible Bio gas plant has to be promoted.

In some of the Uthirakosamangaiyar sub-basin tank ipomoea cornea has invaded, which now has grown several weedy bushes. So it reduces the tank area and makes some environmental problems.

GROUND WATER QUALITY

From the chemical composition data for the observation wells, the ground water in the lower reaches of sedimentary formation is of moderate quality.

ACTIVITIES PROPOSED

To monitor the quality of water and soil and create database regarding the Environmental Status for each sub basin, this proposal has now been included with the following activities at sub basin level.

I. WATER AND SOIL QUALITY MONITORING, PROJECT WORKS MONITORING

So far, No Water samples were collected and tested in this sub basin. Now it is proposed to collect and test water samples at four points for a period of three years to assess the Environmental impact on the quality of surface water of this sub basin. Water samples at the following location will be collected once in 3 months

1. **UM.1 - Railway Bridge at kamuthakudi. (Right main canal)**
2. **UM.2 - Paramakudi to Mudukulattur Road at Ponniah puram (Right main canal)**
3. **UM.3 - Chatrakudi to Chemmanur Road bridge at Chatrakudi.**
4. **UM.4 -Regunatha Cauvery at LS 35 Km at Kilari village.**

In addition to the above, identified 4 locations, water samples will also be collected twice in a year for the period of 3 years near by wells, tanks channels where sewage is directly let into it to assess the quality.

Soil samples are to be collected –from selected locations to assess the impact of the quality of soil due to various environmental problems like use of chemical, fertilizers and using the polluted water. From the selected location five Nos. of soil samples at regular one year interval have to be collected and tested to determine preciously the impact on the degrading of the quality of the soil.

II. ENVIRONMENTAL AND SOCIAL KNOWLEDGE BASE

Micro Level Environmental Status Report has been prepared for the entire sub basin. To prepare an Environmental Action Plan of a River basin data regarding environmental issues in sub basin wise is necessary. Hence, provision for collecting the environmental and social issues in village wise and analysing them and preparing development report has also made in this proposal.

III. TRANSFER OF TECHNICAL KNOWS HOW FOR SOLID WASTE MANAGEMENT SYSTEM

Now, a new scheme for Solid Waste Management plan is under implementation in all Municipalities and major panchayats. Under this scheme, collection tank for disposable and non-disposable garbage have been constructed in most of the Panchayats. But, recycling the waste and converting the solid waste into manure and production of energy from them are yet to come up.

Hence Demonstration and action programs are planned with user agencies and necessary field visits exclusively for officials of local body and Panchayat presidents & members are programmed to transfer of Technical Know How for Solid Waste Management.

III. CONDUCTING AWARENESS PROGRAMS

Awareness Programs are necessary to create awareness among the public about Environmental aspects and the action to be taken by them to remove or reduce the impacts due to the Environmental problems. So far No awareness Programs were conducted in this basin.

Hence, to create and motivate the people, Awareness programmes are to be conducted in the villages where sewage is directly let into water bodies. It is proposed to conduct Awareness Meeting in School/ Institutions and Awareness programs in the villages during the study period of three years covering the following subjects. In addition to the above Placing Stickers, bit notice, Tin sheets, Pamphlets and Placing banner containing messages about, the following Environmental problems.

- **Sanitation.**
- **Solid waste treatment.**
- **Sewage treatment and converting the same into gas**
- **Organic farming.**
- **Conversion of aquatic weeds into manure etc**

As per the instructions of the environmental specialist Mr. Anupham Joshi, the following alterations are made in the proposal,

In addition to the above, pesticides test for water quality is added and test will be carried out for four locations for once in a year.

Moreover, it is proposed to conduct field visits for environmental monitoring of project activities with respect to environmental safe guards.

It is proposed to study the impact due to project investments and hence, provisions for" data collection and development reports" have now been added.

Provision for preparing environmental atlas is now inserted in the context of marking all environmental and social issues with consultations of stake holders, line departments and NGOS.

MODE OF EXECUTION

All the works proposed are to be carried out by outsourcing through an Educational Institute

TOTAL COST

The total cost works out to Rs: 17.70 Lakhs (Rupees Seventeen Lakhs and seventy thousand only)

Environmental Monitoring on Water and Soil quality and Creating Awareness , updating of " Environmental & Social assessment report" for UTHIRAKOSAMANGAIYAR SUB BASIN

DETAILED ESTIMATE

Sl no	Description of work	No	Measurement			Contents
			L	B	D	
I.Water, Soil Quality and project works Monitoring						
a)	Testing charges for Water samples 4x3X3=36					
	Water samples from Tanks and Wells collected once in Six Months 5x2x3=30					
	Testing Charges for Water samples	36+30				66 Nos

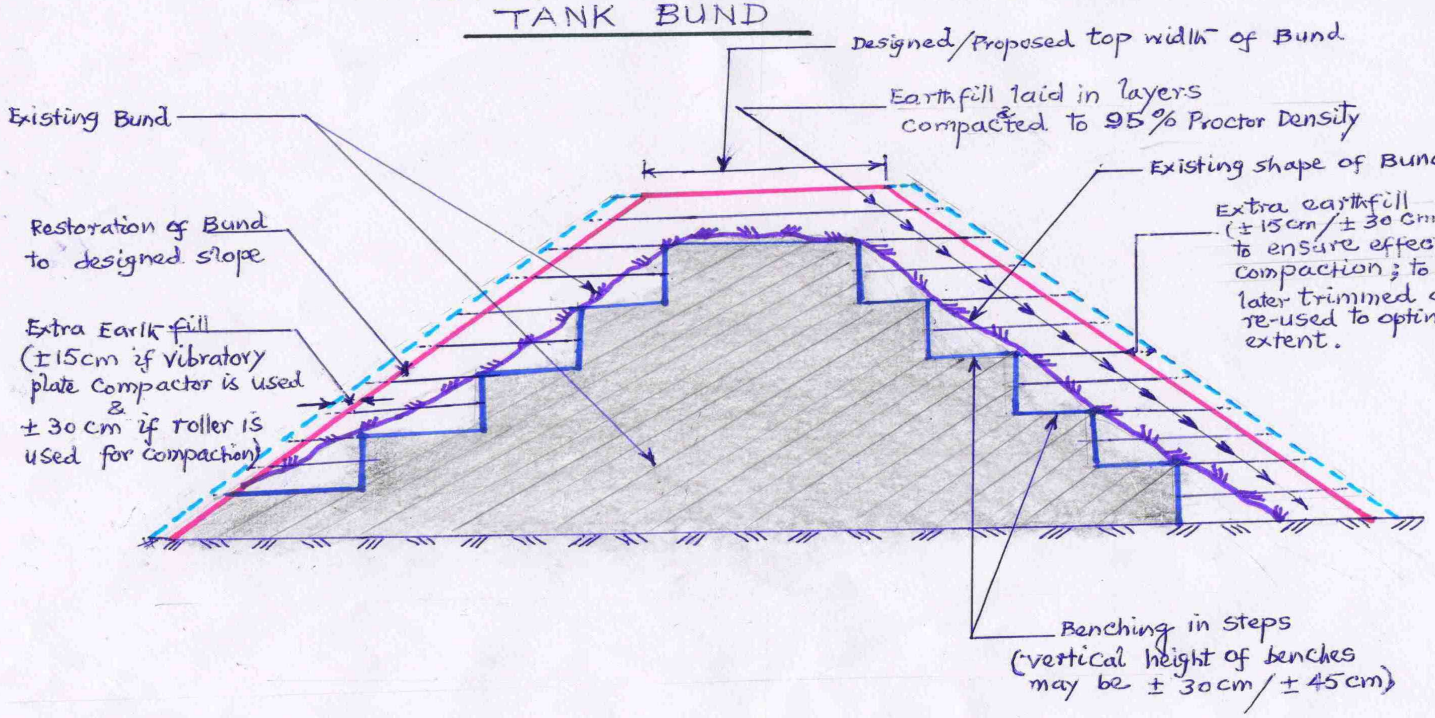
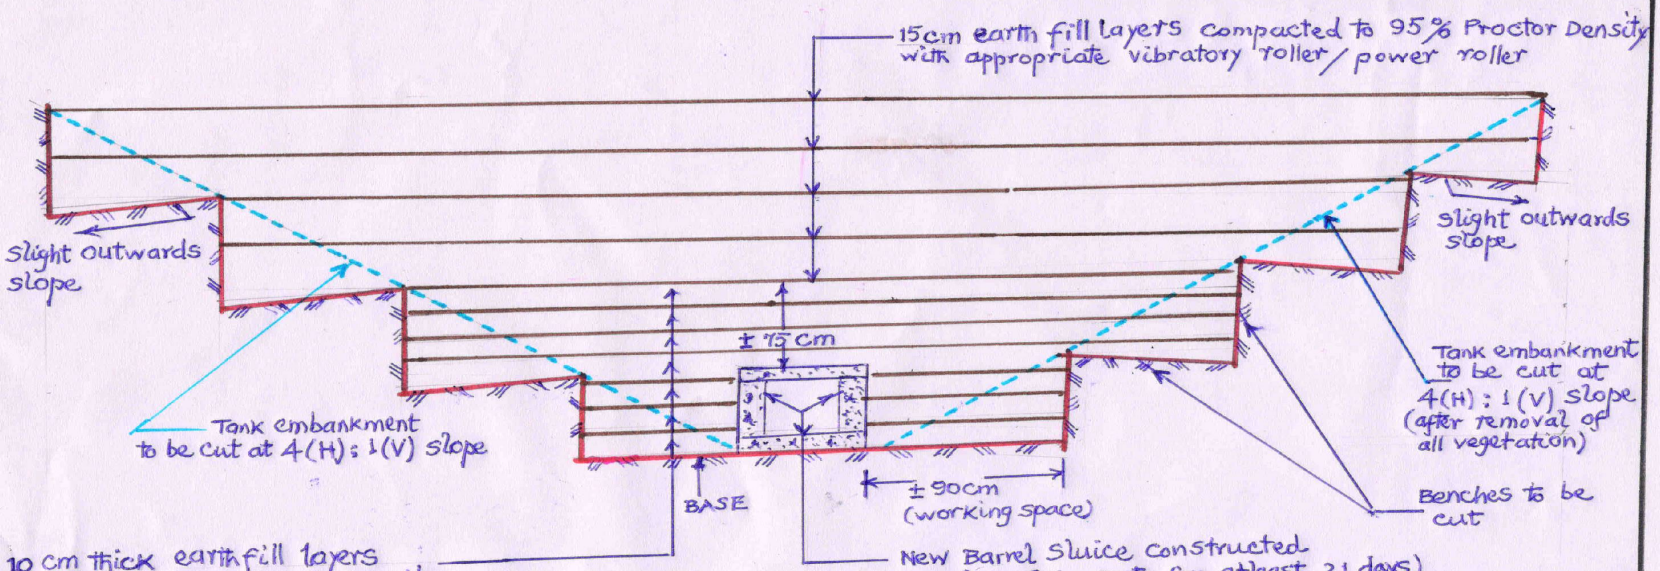
RAISING & STRENGTHENING OF TANK BUND



TYPICAL SKETCH



RECONSTRUCTION OF SLUICES

NOTES

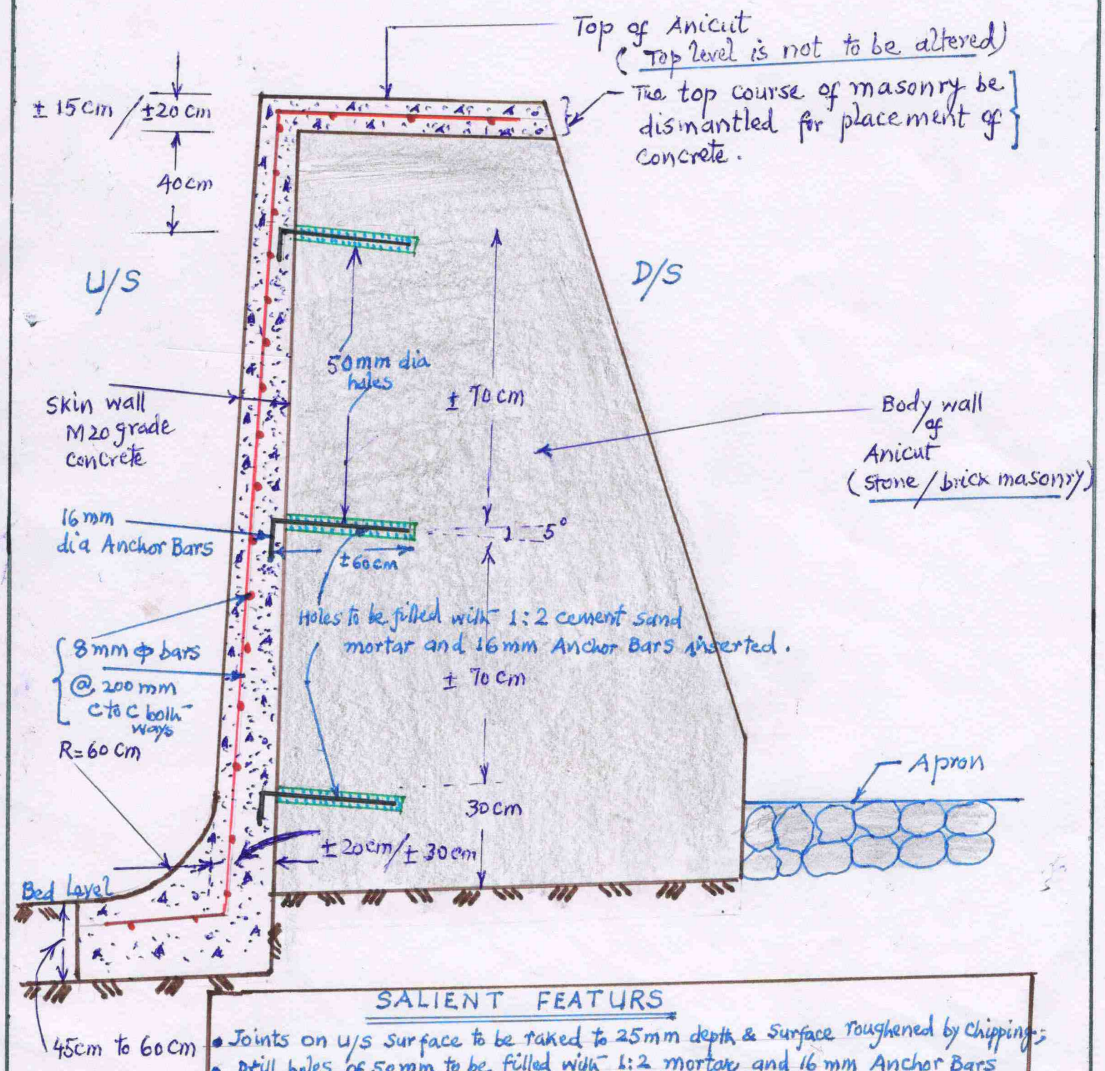
(i) The Base MUST be made smooth & hard, duly compacted with compactors / pneumatic tampers.

(ii) Earth fill compaction adjoining the Barrel and Benches should be compacted by mechanical / pneumatic tampers to ensure effective compaction.

(iii) Earth obtained from "benching" be reused (after removal of clods (bigger than 7.5 cm), vegetation etc) in earthfill layers.

TYPICAL SKETCH

Rehabilitation of Anicut through SKIN WALL Concrete



SALIENT FEATURS

- Joints on u/s surface to be raked to 25mm depth & Surface roughened by Chipping;
- Drill holes of 50mm to be filled with 1:2 mortar and 16 mm Anchor Bars to be pushed in
- The roughened surface to be kept wet for 72 hours and cement slurry (1:2·5) of 0.70 water-cement ratio be applied over the surface prior to placement of Skin Concrete.
- Concrete of M20 Grade is to be used with 20 mm maximum aggregate Size.
- Curing is to be done for 21 days.
- Thickness of Skin Concrete: 15cm at top & 20cm at bottom for Anicuts of height upto ± 1.50 m and 20 cm at top & 30 cm at bottom for Anicuts of height more than ± 1.50m.
